Arrow Electronics Launches On-Line Development Tool Web Site

MELVILLE, N.Y. — March 3, 2005 — Arrow's North American Components (NAC) division of Arrow Electronics, Inc., (NYSE: ARW) announced the launch of [arrowdevtools.com](#), a new web site dedicated specifically to the development tool needs of design engineers.

"We are very excited to offer the engineering community the support that they need during their product development," said Brian McNally, President, Arrow NAC. "And [arrowdevtools.com](#) provides the objective technical information from world-leading suppliers to accelerate this process."

The site serves as a development tool guide providing engineers with access to a wide variety of leading-edge tool vendors and semiconductor manufacturers, as well as detailed information on all their latest available tools. With the help of a proprietary parametric search capability, users can narrow their search quickly and efficiently to find that specific tool that best fits their projects' unique requirements

"In addition to just providing information, we wanted to give customers a one-stop shopping resource that provides a user-friendly interface, multiple purchasing options, and immediate delivery to meet their time-to-market demands," said McNally. "Arrowdevtools.com was designed with these very features in mind."

About Arrow's North American Components Group

Based in Melville, New York, the North American Components (NAC) group of Arrow Electronics, Inc., is a leading provider of semiconductor and passives, electro mechanical and connector products, services, and supply chain solutions tailored to serve distinct customer segments with dedicated sales teams. Three primary, customer-focused NAC groups serve these market segments: The Arrow/Zeus Electronics Group targets the aerospace and military markets; the Arrow Electronics Components Group serves local OEM and contract manufacturing customers; and the Arrow Alliance Group focuses on large customers with complex needs.

Arrow Electronics is a major global provider of products, services, and solutions to industrial and commercial users of electronic components and computer products.
