# Biomarker Evaluation in Young Onset Dementia from Diverse Populations

**BEYONDD**  
Biomarker Evaluation in Young Onset  
Dementia from Diverse Populations

## Going Above & Beyond is in Your Nature

Early onset dementia (EOD) impacts people at the peak of life. It changes the way people think, act, talk, and behave. New treatments for some forms of EOD will soon be available. Our goal is to improve access for people from diverse communities.

If you are between the ages of 40 and 64 and are concerned about your thinking or memory ability, the BEYONDD study might be right for you. Volunteers are needed to help researchers support better brain health in diverse populations.

### You may be a great candidate to participate in research.

Do you find yourself experiencing:

- Changes in personality or mood that affect your daily life?
- Problems with planning, organizing, or solving problems?
- Difficulties managing or completing tasks you've done before?

Join the study looking to lower the health disparities in the U.S. and make sure that people of all races are included in finding new ways to treat EOD.

### Early detection makes a difference.

Your participation can be life changing for you and others. By joining, you can help researchers find out more about early brain problems in diverse populations.

### Learn how biomarkers can help you understand your brain health. Find out if you are at risk for brain health problems.

Few people ever get the chance to learn how their brain works on a biological level. With the help of the latest technology, including blood tests and electronic tests of thinking and memory, we'll help you understand what's going on in your brain better.

## Study volunteers get some amazing perks.

You'll get to work with world-renowned experts and learn more about your own health. You'll have access to blood work, clinical laboratory tests, and feedback from the clinical team. If you are able and willing to come into one of our expert centers after completing the online study, you can access a one-on-one session with a doctor and brain scans. Even better, it's all at no cost to you.

### There's more to discover.

We are committed to diversity and equity in community-based research.

BEYONDD is a diverse team of doctors, scientists, and other researchers, working together to bring diversity and inclusion to EOD research by reaching out to Latinx/Hispanic, Black/African American, Asian American, Pacific Islander, and American Indian/Alaska Native adults.
