

# LazerChop 3000

## Battery Life

Your LazerChop 3000 is equipped with state-of-the-art battery saving features, making battery use far more efficient than competitors. Below is the estimated use time between charging. These numbers were compiled during real-world testing. Results may vary, based on a variety of factors.

*Hours of use on a full charge at each power setting*

Here you can see that the Extended Life Battery can be used approximately twice as long as the Standard Battery per charge, while the High Capacity Battery is around halfway between the two.

For light use, we recommend the Standard Battery, which comes with your LazerChop 3000 when you buy it. If you are a serious user, try the High Capacity Battery. Power users will want to purchase the Extended Life Battery.

And remember, no matter your choice of battery, our new Speedy Charger will recharge it in one-third the time of the normal charger.
