

Steel Is Best for a Strong Tiny Home

Are you fascinated with the minimalist movement or looking to leave less of an environmental footprint? If so, these and many other exciting benefits may have led you to look into getting a tiny home of your very own! You will be amazed at the options that are available with tiny homes!

Join the Tiny Home Movement

The tiny home movement is all about living a more simplistic lifestyle with a less is more approach to things. A tiny home can range anywhere between 100 and 400 square feet, but a few are significantly larger. The size of the home helps you make choices that put quality above quantity.

Is it Better to Buy or Build a Tiny Home?

Buying a tiny home will generally cost around \$195 – \$250 per SQFT. You are purchasing the home with everything done and ready to move it. This is really appealing for some people. For others, they would rather the home be built specifically for them with customizations to match their lifestyle. In this case, building a tiny home is the best option and will cost around \$200 – \$400 per SQFT. If you choose a tiny home for economic value and want the most bang for your buck, the best option is a prefab metal building that will cost on average \$12 – \$14 per SQFT, and \$40 – \$120 per SQFT for the interior finish. The great thing about this option is that you have complete control over doing your interior design exactly as you want.

Where Do You Put a Tiny Home?

You can put a tiny home anywhere you can buy or rent a space big enough to put it. Some tiny homes are even built onto a base with wheels so you can transport them easily! However, keep in mind, where you choose to put your tiny home may impact the final cost. Metal buildings must be built with snow load and wind load in mind, and there must be a proper foundation.

How Tiny Is a Tiny House?

Exactly how tiny your home will be is up to you and your family's particular needs. One thing to take into consideration is whether you intend to place your tiny home in a permanent location or if you want to have it built on a platform with wheels so that it can be transported.

Of course, you will also need to consider any local building ordinances, as some tiny home communities do have regulations regarding the size of the homes in their specific community. Tiny homes come in several standard size to accommodate your needs:

- **20x35 Metal Home**

A metal home kit will offer you a great economical option with all of the ability to customize that you could ever dream of! This size steel building kit gives you an option of up to three bedrooms, and would make an amazing cabin, home, or lodge!

- **30x30 Metal Home**

A steel home will allow you to custom design without the price tag of an architect or engineer. They will help you leave less of an environmental footprint while still providing for all of your household needs! This size of building can accommodate up to 3 bedrooms and 2 bathrooms as well as a great room and kitchen. This would make an incredible home, cabin, or lodge.

- **30x40 Metal Home**

Metal homes are much stronger and more durable than homes made of traditional materials. You can expect your metal home to easily last for more than 50 years with almost non-existent maintenance needs. A 30X40 metal home will give you the option to have as many as three bedrooms in addition to two bathrooms. This home is designed with a fabulous option for a carport, too! You can use this building for a tiny house, a mobile classroom, or an additional industrial kitchen.

- **30x50 Metal Home**

Metal provides more structural integrity than other material choice on the market when it comes to building homes. A metal tiny home will provide you with safety and security for years to come! This 30X50 metal home building kit will give you a spacious layout with two bedrooms and an open kitchen and living room concept. You can also add the optional feature of a two car garage at the time of build or later on. This makes a perfect family home, cabin, or lodge.

- **30x60 Metal Home**

The steel tiny home is the home of the future. They are economical, environmentally friendly and more durable than any other home building material. A 30X60 metal home allows for a design that includes up to four bedrooms! It features an optional detached garage, which can be added at the time of your quote or later on.

Steel Tiny Homes are Unmatched in Sustainability

Sustainability is a big part of the tiny home movement! Building with steel reduces waste and keeps harming the environment to a minimum. Having a metal tiny home will also promote living a healthier and simpler lifestyle that will add even more to its sustainability.

Steel Guarantees Consistent Construction

When you start to consider tiny homes, you will see how many excellent options you have to choose from. You will also notice the unmatched construction of the homes. They are much more solid and sturdy than homes made of wood that are nailed together. The bolts and screws of metal homes hold them securely in place to guarantee your safety and security for the length of your time in the home.

The Strength of Steel

There is no doubt that steel is more robust than wood, which means that it will build you a better, tougher, stronger home. A steel home will last you a lifetime, and the structure itself will need almost no maintenance at all. Steel is absolutely unmatched in its strength.

Steel Tiny Homes Offer Greater Design Versatility

One of the most significant advantages to building a steel tiny home is the design versatility that it offers you. You can choose the number of bathrooms or bedrooms and even have open floor plans! Pick the home that best suits your family's needs and get started right away!

Steel Tiny Homes Are Amazingly Adaptable for Many Applications

While steel buildings make the best tiny homes, they are also fantastic for many other applications, including commercial uses. Aside from a family home you can use a steel tiny home as a classroom, apartment complex laundry room or maintenance building, a concession building, a portable classroom and so much more!

Metal Tiny Homes Give You Unmatched Safety & Durability

No home can compare to a steel tiny home when it comes to strength, durability and safety. You can count on your metal building to last for as long as you live there. You won't need to worry about fires, termites and other pests or the myriad of maintenance issues created by a wooden home. Your metal tiny home will provide you with a lifetime of worry-free security.
