

WHY GO SOLAR?

Solar power is the cleanest and most abundant energy source – even better, it's affordable. When you power your home with solar energy, you always have electricity and heat without putting harmful carbon emissions into the atmosphere or breaking the bank.

Benefits of Solar Energy

Saves You Money

Your solar panels pay for themselves over time by using less electricity from your local utility provider. Plus, solar panel maintenance costs are very affordable. So even when you need repairs or routine maintenance on your solar panels, your wallet won't take a hit.

Clean Energy

Solar power uses the sun for its energy source. Electricity from local utility companies relies on fossil fuels to provide power. Since you use less electricity from the utility companies, you lower your carbon footprint. That means less greenhouse gases, fresher air and a healthier planet for generations to come.

Ample Power

The sun is our most abundant energy source. When your solar panels are installed where they receive enough photons during daylight hours, your home always has power – even on cloudy days. Solar provides electricity to everything in your home, even your hot water heater.
