Rising for the third straight week, **US jet fuel** supplied – an implied measure of demand – rose to a 16-month high during the week ended July 23, **US** Energy Information Administration data showed July 28.

Total **jet fuel** demand rose 247,000 b/d on the week to 1.65 million b/d. Demand was last seen higher during the week-ended Mar. 13, 2020 at 1.75 million b/d before falling to 352,000 b/d in May of that year at the height of the coronavirus pandemic

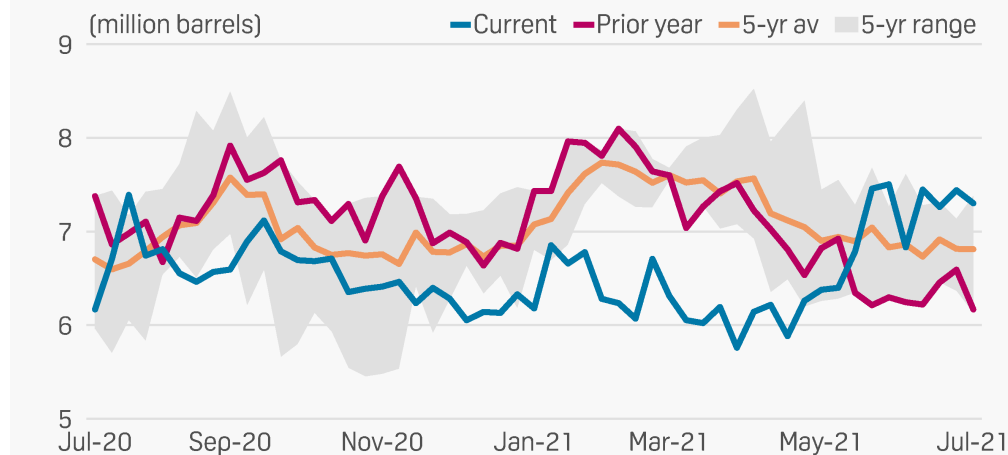

Nationwide **jet fuel** stocks climbed for the third consecutive week, rising to 45.1 million barrels, up 79,000 barrels the week prior. **Gulf Coast** and West Coast production led with the strongest regional builds.

**Gulf Coast jet** inventories rose 338,000 barrels to 16.4 million barrels, the highest in a year. West Coast stocks rose 149,000 barrels on the week to 8.9 million barrels.

**US** fuel production dipped 1,000 b/d on the week to 1.4 million b/d. Still, production on the Gulf rose 46,000 b/d on the week to 785,000 b/d, its highest in 16-months.

Production drops in the Midwest and West Coast, however, offset the **Gulf Coast** production spike. Midwest **jet fuel** production fell 38,000 b/d on the week to 236,000 b/d, **EIA** data showed. On the West Coast, production hit a 7 week low, dropping 11,000 b/d to 325,000 barrels.
