GERMAN
DESIGN
AWARD
2020

Do you want to save your money, water and energy while using environmentally friendly bathroom products?

- Hoteling and residential bathroom owners often face problems of leaky faucets in their bathrooms. These faucets could prove to be extremely expensive for them as this can waste thousands of gallons of water per year which can inflate their water bills . Water damage caused by a leaky faucet is an additional problem faced by business owners. Since, leakage of the pipe under the sink can pool on the floor. If this thing is left untreated, it could cause structural damage .
- Frequent usage in commercial and residential environments could cause failure of internal toilet parts . In addition to that, pipes behind the walls could silently drip, and that can waste thousands of gallons of water per year. Moreover, it can also create a hole in the bottom line causing structural damage. It can also cause a hike in the water bills.

What is the solution?

- Eumar design winner of the "German design 2020" offers the perfect solution for commercial and residential bathroom users. The downtown range is especially designed for this purpose. The paramount concern of the eumar design while developing the Downtown range was to fulfill its commitment of providing consumers with a consistently clean, comfortable washroom experience. The main objective of creating bathroom products is to provide environmentally friendly products with a strong

focus on saving water and minimizing energy consumption. It provides users with all-in-one, plug and play ensuite for their public bathroom up to 3,5 meters in one pcs for 1 to 5 users. The Downtown offers the perfect solution for projects that require both an exacting design aesthetic and the very highest performance standards. Since, with its exclusive design and quality finishes, it suits perfectly to high-specification commercial washrooms and changing areas.

- Lots of hand washing systems combine parts and pieces from various manufacturers which seldom work perfectly together. On the other hand, Downtown Collection is a system that streamlines the restroom ecosystem through a single-source manufacturer. Moreover, it also reduces the installation time, increases effectiveness, and maintains reliability.
- Downtown collection delivers a powerful performance along with easy and quick installation. Moreover, it's flexibility in sizes and combinations makes it a stunning hand-washing system for hotel and residential suites and public lavatories. It can be easily categorized as the most user-friendly, design-forward hand washing product on the market today. Eumar Downtown is a valuable long-term investment in line with the brand image and the high quality of commercial and residential users.
