My doctor knows me better than I know myself.

You're passionate about your patients, and they depend on you for the best possible health outcomes. A more informed care team means better healthcare and better results. Our passion is helping you focus on patients and their health instead of worrying about technology and data. With VitreosHealth, your care team has clinical and non-clinical insights about each patient, to achieve better outcomes. We show you their health risks, by disease, and what steps you can take right now to achieve better health outcomes.

GREATEST PREDICTIVE POWER. LARGEST ARSENAL OF DISEASE MODELS. BEST HEALTH OUTCOMES AT LOWEST COST.

VitreosHealth arms providers and payers—care managers, clinicians, administrators and stakeholders—with role-specific insights and predictive risk scores for each patient, so they quickly zero in on which individuals need attention, where their health is headed, and what intervention(s) each member needs right now to reduce the impact of chronic illness and avoid or delay the onset of disease.

Vitreos Insights lets you close gaps in care, and eliminate clinical and non-clinical obstacles, to deliver the right care at the right time to the right patient, improve health outcomes and avoid unnecessary ER visits and hospital admissions. All Vitreos Insights Apps are powered by VitreosHealth Population Health Management predictive and prescriptive analytics, leverage the largest arsenal of disease-specific and non-clinical predictive risk models, and apply every single source of data at your disposal: EHR, claims, household and consumer, socio-economic and behavioral.

My doctor's burned out. Should I be worried?

ELIMINATE THE BURNOUT. GET BETTER OUTCOMES.

NO MORE SOFTWARE

Vitreos Insights are at your fingertips without the hassle of technology. Our proven ramp-up methodology lets you start tackling your population health priority list within 3 to 6 weeks1, and zero in on gaps-in-care on the very first day. Vitreos Insights-as-a-Service means no software, no integration, no training, and no business analysts.

EVIDENCE-BASED CARE GUIDELINES

Get back to the physician-patient relationship when we show you exactly where the gaps-in-care are, and provide prescriptive insights—evidence-based care guidelines—so you can deliver the right care at the right time, or help patients remove obstacles to care so they can focus on good health.

ACCURATE RISK MODELS

VitreosHealth has the largest library of disease and non-clinical risk models in the industry, and the highest health risk prediction accuracy. More importantly, the Vitreos prediction engine continuously tests and adjusts risk models in context of your patient data, to continually compound predictive power.

START WHERE YOU ARE

Get started with the information you have at your disposal—it doesn't matter if it's EHR, billing or claims. Then add household, consumer, socio-economic, behavioral and other data sources as they become accessible. Every piece of data adds dimension and strength to your insights, and we do all the "data magic" so you don't have to.

VITREOS™ HEALTH

The last few years have been tough on healthcare professionals—new technologies, new legislation, and even new opportunities. With all the distractions, we know it's hard to focus on improving patient health outcomes. Wouldn't it be nice if you could just get back to the physician-patient relationship, and helping people with their health?
