

Trinity Mother Frances Continues Tradition of Highest Standards in Quality and Patient Satisfaction in Partnership with VitreosHealth

History-rich healthcare system looks to innovative technology company to fuel next era of creating healthy lives for people and communities.

FOR REVIEW ONLY, NOT FOR DISTRIBUTION – APPROVED DRAFT AS OF JAN 19, 2016

Plano, Texas — January dd, 2016 — VitreosHealth, the leader in predictive and prescriptive health insights for population health management, today announced that East Texas' preferred healthcare provider, Trinity Mother Frances Hospitals and Clinics, has chosen VitreosHealth to accelerate its population health management initiative with health insights powered the company's by predictive risk models and analytics.

"Most healthcare systems and groups have a difficult time connecting the dots from care management programs, to health outcomes, then financial results," comments Scott Smith, M.D., Senior Vice President, Trinity Mother Frances Hospitals and Clinics and Trinity Clinic. "We're on a journey to go beyond connecting those dots – we want to definitively identify gaps-in-care and deliver the right care at the right time to our patients – so that we drive better health and better outcomes. Understanding where costs go in the health system is also of great importance. We chose VitreosHealth to help us identify patients who are at the highest financial risk so we can provide care coordination to them."

Trinity Mother Frances is a recognized national leader in patient satisfaction, advanced technology and quality initiatives, and the organization consistently leverages innovative technology to advance and maintain their high standards. With VitreosHealth's disease-specific and non-clinical predictive risk models, the East Texas healthcare system will arm the people throughout their healthcare continuum who can move the needle on financial performance with health insights – clinicians, care managers, program directors, network managers, VP's and even the C-suite.

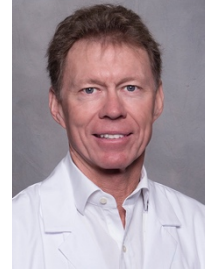

VitreosHealth's "no installation," one-stop, soup-to-nuts approach to risk analytics, care management insights, and quality reporting means that Trinity Mother Frances can achieve quick time-to-value in their population health management efforts, without having to invest in additional systems, data warehouses, BI or implementation – they anticipate actionable healthcare insights within a few weeks after data starts flowing through the ViteosHelath's analytics engine.

"We're honored that Trinity Mother Frances, an acknowledged leader in patient satisfaction and quality initiatives, has chosen VitreosHealth as their analytics partner to power population health management initiatives," said Jay Reddy, President and CEO at VitreosHealth. "We are deeply passionate about helping healthcare organizations maintain a patient-centric focus while enhancing their financial performance. We attribute our ongoing explosive growth to customers like Trinity Mother Frances. By focusing on their success, we ensure our own."

According to Roger Fowler, M.D., Medical Director of Population Health at Trinity Mother Frances, “Our staff already has access to data through the EHR system. With VitreosHealth, we can put all that rich data to work to become more patient-centric and proactive. It’s the difference between waiting until someone lands in the ER or hospital, and working to prevent high-cost episodes of care.”

About VitreosHealth

VitreosHealth enables disruptive change in population health management. Vitreos Insights-as-a-Service delivers population risk models and predictive and prescriptive health insights so everyone throughout the healthcare continuum can achieve a patient-centric focus and contribute to financial performance. With VitreosHealth’s closed-loop performance management process, you can transform the business of population health management into a center of excellence to enhance clinical efforts and drive better health outcomes. Insights start with predictive clinical risk scores, non-clinical markers, gaps-in-care, and prescriptive care recommendations. We show your care managers, clinicians, administrators and C-suite, which patients and members are going to become high risk, predict their probability of hospitalization or escalation of chronic disease, and help determine the interventions they need right now to delay or avoid high-cost healthcare episodes. Healthcare providers and payers choose the insights delivery method that’s right for their organization – mobile 3-click insights apps, embedded into the EHR or workflow system, or via other electronic format. VitreosHealth Population Health Management powers all predictive and prescriptive analytics, leverages a comprehensive portfolio of disease-specific predictive risk models, and applies every source of data at your disposal: EHR, claims or billing, household, consumer, socio-economic and behavioral. VitreosHealth – everything you need to power population health management. Learn more at www.VitreosHealth.com.
