

Higher quality interpretations, faster turnaround times

See how Imagen's expert, cloud-based, AI-powered radiology interpretation services can help you deliver the highest quality patient care.

Imaging interpretation challenges

Independent primary care practices with on-site imaging are a vital part of our healthcare system, providing important regular screenings and enabling the early diagnosis of serious health conditions. So why is finding high-quality imaging interpretation so difficult?

Many smaller practices are getting short-changed in imaging interpretation—turnaround times are long and reports are inconsistent. Plus, a study in the *American Journal of Roentgenology* found that 30% of normal diagnostic exams have errors or missed findings.¹

Available modalities

- X-ray
- DEXA
- Mammogram (screening & diagnostic)
- ABUS
- Ultrasound
- Echo
- Fundo
- CT

Top-tier radiologists

Our radiologists go through a rigorous testing program and we only hire the top 30%. Then, our robust QC system ensures they maintain interpretation excellence, year after year.

Higher-quality interpretations

Our structured interpretations improve quality and readability for physicians, so you can diagnose and start treatment sooner.

Faster results

Faster interpretation means a faster diagnosis and a faster path to treatment. With Imagen, 95% of images are turned around within 24 hours.

Seamless integrations

Our interpretation workflow integrates seamlessly with your EMR. PACS integration puts images right where they're needed—in the primary care provider's hands.

With Imagen, you're more than just your imaging files. Your radiologist knows you by name, is available for questions, and is a true partner in delivering the very best imaging interpretation. Visit imagen.ai/contact-us/ to learn more.
