## Pre-Construction Services

### Design/Build and Design/Assist

With Ecker, you don't need to have it all figured out before you come to us. Within our pre-construction services agreements, we offer design/assist and design/build. When you bring your own facility drafts, our design/assist team provides edits and suggestions—or completes your unfinished design—to make sure your build functions perfectly.

But you don't need to hire an engineer or bring a design to get an excellent facility. Our expert design/build team handles the engineering, drafting, and contracting and get your facility up and running quickly and effectively. Our pre-construction management services meet your unique build requirements with unmatched quality.

### Budgeting and Quality Engineering

The first step in your design build is determining how to get the best facility within your budget.

Over the past 50 years, Ecker developed relationships with local engineers, vendors, and contractors to keep your pre-construction services cost down. Whether you bring your own design or we assist in planning your facility, we handle the pre-construction management to ensure the most effective and efficient build.

We understand the balance of budget and quality, which is why we set out to deliver excellent construction at a cost that can't be beaten. Our experience in the industry saves time and money, because we get it right the first time, every time. We specialized our own facility to handle your design, contracting, and fabrication needs, so we don't need to outsource our materials or resources, which allows us to provide higher quality service for your budget.

### Prime Contracting and Subcontractor/Vendor Selection

We handle the logistics of your pre-construction design and plan a facility you're proud to showcase. As your prime contractor, we manage more than your mechanical construction. At Ecker, we are certified to function as your general contractor under our pre-construction services agreement. We deliver same quality brought by our mechanical construction to every other aspect of your facility.

Allow us to subcontract the non-mechanical needs of your build and we guarantee a quality, lasting facility finished in-budget and on-schedule. For over 50 years, we have worked with a variety of construction vendors, so you can trust we know who holds the highest standards in the industry. We keep the value of your time and budget at the forefront of our vendor and subcontractor selection.

### Coordination with AutoCAD

One of our pre-construction services benefits is our coordination with AutoCAD. At Ecker, we believe that a product isn't worth delivering if it isn't perfect for the facility. That's why we

won't accept human error in your design/build. Our certified AutoCAD designers ensure expert precision to our commercial pre-construction services.

We test every draft through our AutoCAD programs to guarantee your systems function correctly for the life of your facility. After we begin the actual build, our pre-construction planning services guarantee every piece delivered and installed fits and functions exactly as planned.

## Mechanical Construction

Whether you're looking to start your first build, tenth build, or renovate your current facility, we make the process simple for you. Our mechanical contracting teams deliver high quality work every time.

We specialize in turnkey projects, managing your build from design to completion. With over 50 years in the industry, we ensure a quality mechanical construction, on-time, and in budget. Should your project require more than mechanical construction, we'll handle sub-contracting the other elements. When you choose Ecker, we simplify the process and handle coordinating the project with multiple parties and contractors for you.

We offer mechanical construction services and retrofitting for all of your commercial, industrial, and institutional needs. We provide unique installations with our HVAC and plumbing construction services by creating custom metal through our own fabrication shop, keeping costs down while maximizing the total working space of your facility.

### HVAC Construction Services

At Ecker, we understand the requirements of your facility's heating and cooling systems, and how important it is for those systems to function correctly every day. That's why our technicians pride themselves in quality installation. We will never install a piece of duct that doesn't fit perfectly, because we know how important proper air flow is for your build. When you choose Ecker, we guarantee our HVAC construction services will keep you warm when you need warm and cold when you need cold.

We offer all kinds of standard and specialty HVAC construction services like boilers, chillers, temperature controls, ductwork, computer server rooms, make-up air, and anything else your facility requires. No project is too complicated or large for us to provide your facility with a custom and quality HVAC system.

### Plumbing Construction Services

Before Ecker grew to handle mechanical construction of all kinds, we started as plumbing contractors. As such, we pride ourselves in delivering high quality plumbing and pipefitting in our mechanical construction services. Our certified plumbers ensure all of your facility's water and waste management systems function effectively. Every pipe and utility in your build is custom fitted to meet your unique needs, maximize efficiency, and maintain your budget.

Our plumbing construction services include pumps, hydronic piping systems, sewer and utility location, drain cleaning, and any unique water needs your facility has. Our certified and experienced plumbers can install any kind of system or pipe you want or need.

### Refrigeration Construction Services

When your facility needs resources, supplies, or food to stay cold, we keep it cold. As your refrigeration contractors, we ensure quality systems to maintain temperatures and energy efficiency. With refrigeration, any improper sealing or installations may ruin resources or waste money. That's where our refrigeration construction services stand out. Our technicians won't leave the site unless your system functions perfectly and keeps the cold inside.

We provide quality and energy efficient refrigeration construction for food service, medical, industrial, and commercial facilities. We offer energy management and temperature control, variable refrigerant, and any custom refrigeration needs you may have.

## Sheet Metal Fabrication

Our sheet metal fabrication shop is one of Michigan's main suppliers for ductwork and custom metal products. Originally started to supply HVAC sheet metal for our mechanical construction, our shop expanded to create custom metal to meet all of your facility's needs.

Our sheet metal fabrication team takes pride in their work and won't ship a piece if it isn't correct.

### [h3] Looking to Build?

As a piece of our design build process, we draft specialized metalwork for your facility's HVAC and commercial needs. Since we fabricate our own sheet metal, we meet your designs below the cost of other contractors. Our shop makes sure your facility has custom ductwork and other metal to maximize efficiency and workable space.

Our experience in sheet metal fabrication assists your build beyond HVAC and ducts. We create custom tables, fans, casings/housings, and so much more. If it's made from metal, we can make it.

Our fabrication shop also provides welding, cutting, and repairs. When you need custom work, we make the process quick and simple.

### [h3] Looking to Buy?

As one of Michigan's main suppliers of sheet metal, we make sure your next project has all of the metal it needs. We pride ourselves in getting the product right the first time.

When you purchase from Ecker, we guarantee the metal will arrive to your exact specifications and within your timeline and budget.

## Service

With Ecker, our work doesn't end when your facility is finished. We keep your utilities up-to-date and running. We provide inspection, repair, routine maintenance, and installation for all of your mechanical, plumbing, electrical, and refrigeration systems.

We know all industry standards and inspection requirements, ensuring your facility is never behind on its certifications. Our full-service mechanical contractors run diagnostics and tests on all of your systems and keep them running like new for years. The Ecker standard of quality is the highest of any mechanical and service contractors association.

### [Schedule Maintenance]

Looking to Retrofit or Repair?

No problem! Our mechanical contractor services extend beyond your initial build, whether or not your system was installed by Ecker. We offer installation, maintenance, and repair to any system. The experienced technicians at Ecker work on any plumbing, refrigeration, electrical, or HVAC service and get your facility running like new.

Ecker gets your facility updated with new, improved, or custom systems. As one of Michigan's premiere field service HVAC mechanical contractors, we utilize our sheet metal fabrication shop to fit your facility with a unique heating and cooling system. Our plumbing and pipefitting services will keep your facility's water and waste management needs functioning more efficiently.

We understand the cost of downtime during a renovation. That is why we never install a piece of equipment, duct, or pipe that is not absolutely perfect. Our mechanical service contractors get the job done right the first time, with quality that keeps your facility running for years.

Scheduling regular maintenance with Ecker guarantees your facility runs continuously and efficiently. As your mechanical contractor service manager, we schedule routine checks, yearly inspections and certifications, and remain on-call in case of emergency. For us, your regular maintenance is more than a checkbox, it's an assurance of quality. Our technicians will not leave your facility unless they are certain your systems are in the best working order.

In Need of Emergency Service?

Ecker provides mechanical contractor field service you can rely on. In an emergency, we get you up and running again within hours of your call, 24/7. We understand the importance of keeping downtime to a minimum. Our technicians are always on-call and have the skill and experience to fix the issue quickly and effectively.

Even in an emergency, Ecker full service mechanical contractors guarantee the same quality we provide with equipment installation and regular maintenance. We won't leave until your systems function correctly. With our mechanical contractor field service management, emergency calls will be rare, because we don't just get your system back online; we restore it to better functionality.

## Who We Are

Ecker Mechanical Contractors, Inc. is a full-service mechanical construction contractor and sheet metal fabrication shop in Burton, Michigan.

We built our company serving local schools and hospitals as one of Mid-Michigan's primary mechanical and plumbing contractors. We provide construction services for industrial, commercial, and institutional facilities. Our design/build, design/assist, and services for mechanical, plumbing, HVAC, electrical, and sheet metal projects set us apart from other Michigan contractors.

For over 50 years, Ecker has maintained a reputation of providing quality products on-time and in-budget. Our expertise and experience ensure systems that meet your facility's needs.

## Our History (MAKE THIS A TIMELINE?)

- 1937: Bob Ecker starts his plumbing career with Howard Craig Plumbing and works as a Journeyman Plumber with the Local 370 of Genesee County.
- 1966: Bob founds the Bob Ecker Plumbing & Heating, Inc after 30 years experience in plumbing
- 1966: After competing in both the Michigan and National Plumbing Apprentice Contests—where he placed first and fourth respectively—Bob's son Floyd joins as the company's first employee after completing his apprenticeship with Flint Plumbing & Heating.
- 1972: Floyd expands the company to Ecker Mechanical Contractors, Inc., expanding the company's services and adding the sheet metal fabrication shop.
- 1984: David Hendershot—Floyd's son-in-law—joins Ecker Mechanical.
- 1994: David becomes President of the company.
- 2005: David and his wife Julie purchase Ecker Mechanical.
