

VPNs have become essential for Internet users today. From protection against hackers and excessively fervid governments to total freedom on the internet. VPNs are recognized as a way to secure connections with the server, with no risk whatsoever. However, there are various other employments for the VPN. For instance, you can exploit your VPN service provider to cloak your IP address and therefore change it, benefiting from e-commerce websites that are otherwise inaccessible in your area. Likewise, your VPN can be used to modify your IP address in order to gain access to streaming content which you don't have permission to in your area via common channels.

There are tons of utilities your VPN can offer and we will be discussing them all in this article. If you want to make the best out of your VPN, jump in!

## 5 NEW UTILITIES FOR A VPN

### **ECONOMIZE ON HOTEL AND FLIGHT RESERVATIONS**

As you're hotel and flight hunting online, the travel website has the ability to catch both your IP, along with your location. Prices are exhibited in a currency related to your area. Believe it or not, charges differ with your location accordingly! Let's say you're booking a flight to Mexico while you're in the US, it will be more expensive than Mexico's. You can then do two things: ask someone you know in Mexico to make your bookings or get a VPN. Your choice.

Having a VPN will not only change your IP but also the travel website won't know your true location. Correspondingly, you would have saved a lot of money on your travels.

### **USE PROTECTED PUBLIC WIFI**

Free WIFI is available in coffee shops. However, public WIFIs are not protected, meaning this WIFI might not be the property of the coffee shop originally to start with. It might be a source for hackers. In fact, hackers can scrutinize your activity while you're connected to a public network, sending data though. Both your username and password are in jeopardy.

Use a VPN to prevent such situations from happening. A VPN lays out a secure and encrypted passage between your machine and the server you're connected to. This signifies that an ineligible try to detect your activity would be fruitless.

VPNs are a must-have if you're a frequent public WIFI user.

### **GUARANTEE SECURITY DOWNLOADING AND UPLOADING DATA**

VPNs are designed to bring about a secure connection between the server and yourself; they assure that all your data is enciphered and beyond anybody's reach.

A VPN ensures your safety if you work from home and if your data is somehow delicate, enticing potential hackers.

An additional substantial cause to use VPN in Peer-to-Peer activity is that your regular internet speed is not disrupted. Transferring files will be done at the exact same speed as that of your normal internet connection. No one will have access to your liable documents and you can share files securely.

## **BENEFIT FROM LOCAL DISCOUNTS**

Throughout the years, e-commerce sites have been picky as to which areas they give their discounts to.

Consider you want to purchase a designer handbag. You will discover that a single product has two dissimilar values, at two different locations. Amsterdam's Amazon has the same bag worth much lower than the US's Amazon. VPN is the solution for this puzzle!

If you change your IP address, you can purchase the bag at the initial price from Amsterdam's Amazon. Moreover, you can ship it to the US at your doorstep!

## **ACCESS ALL WEBSITES FROM AROUND THE WORLD**

Expat's favorite thing about VPN is the capability to disclose geo-restricted material, such as watching movies or streaming TV series originally produced in their home.

There are many channels unavailable everywhere, even in the US.

If you want to watch your country's Netflix, just connect to a VPN! For instance, if you're Brazilian yet living abroad, you can pick a Brazil VPN server to watch your favorite movies and shows.

These were some of the various ways you can immediately use and take advantage of your VPN. Besides the fact that it secures you from technically all online perils, a VPN is an efficient device to any of you out there who enjoys internet access with no boundaries.

Get your hands on a VPN right now and make the best out of it!

Protection. Freedom. Privacy. Get your VPN now.
