Drostanolone Enanthate is strictly an underground anabolic androgenic steroid that is based on the discontinued Drostanolone Propionate compound known as Masteron. Masteron is a fairly old anabolic steroid first created in 1959 by Syntex and has been sold under several other brand names such as Masteril, Drolban and Metormon with Masteron ...

Drostanolone Enanthate 200mg/ml Also known as Masteron, each vial contains 10 ml of product with a concentration of 200mg/ml Drostanolone Enanthate. Each vial has a hologram and a unique erasable code on the right side of the label.

Catabolism- the processing of complicated substances into smaller ones, which will be partly used for energy and partly as a material for biosynthesis. It is the energy withdrawal out of large molecules (which you got from food or those which were stored in muscles, glycogen storage or fat storage of your body) .

When we eat, we are in a post prandial or fed state. The food we consume is broken down into simple molecules and either converted to ATP (energy) or stored as glycogen in the muscle or liver, fat in various parts of the body or muscle, all of which are anabolic mechanisms largely facilitated by insulin.

Drostanolone Enanthate 200mg/ml Applications: There are two forms of Masteron that are generally available for use Drostanolone Propionate and Drostanolone Enanthate. The propionate version is usually dosed at 50-150mg/ml and is the fast acting version of Masteron, needing to be injected every other day.
