TIBCO® Cloud Path

Your Journey to the Cloud Powered by TIBCO

Cloud capabilities are the key to digital transformation, enabling compelling customer experiences, connected digital products, and optimized operations. With the experience and knowledge of our experts, proven TIBCO® Cloud Path services help create the ideal cloud architecture for your business and deploy your assets to ensure your journey is successful. More than just migrating, TIBCO Cloud Path enables you to take advantage of all that cloud has to offer—operational excellence, accelerated innovation, and an empowered organization.

Hi there! 🌟 Are you looking to

Experience TIBCO® Cloud Path for Yourself

EXPLORE

Benefits

Accelerated Journey to the Cloud

TIBCO Cloud Path is a service that prescribes how and why to take all your assets — technologies, services, and applications, and data — into a cloud-native environment. It provides flexible options to help you maximize your current assets and achieve significant business value as part of your company's digital transformation.

Optimized Cloud Ecosystem

TIBCO works with you to build the cloud environment best suited for your business. We provide a plan for building cloud architecture with TIBCO solutions optimized for the cloud ecosystem of your choice. This includes assessing your current environment, creating a checklist of initial steps for cloud migration, and selecting the best products and architecture.

Designed Specifically for TIBCO Products

TIBCO's experts are inherently knowledgeable in TIBCO products, as well as proven accelerators, tools, templates, and best practices, to ensure you get the most value from all your assets as you advance towards cloud efficiencies.

Increased Agility

To build compelling customer experiences, you must have an agile system. You need to move faster, optimize faster, and change faster to meet your customers' evolving needs. TIBCO's technologies can take you to the next level of agility with real-time solutions, tool automation, and support for cloud native/[microservices architecture](#).

Proven Method to Migrate to the Cloud

Through experience, we've assembled the building blocks necessary to show you what your technology will look like in the cloud deployment of your choice. You can have peace of mind knowing that we have the expertise and tools to get you there quickly and easily.

Capabilities

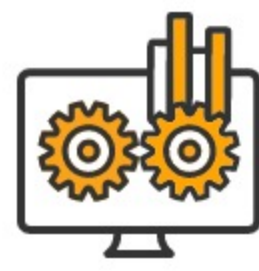

Full Applications Support

TIBCO Cloud Path can help you determine the optimal path for each application: rehost, refactor, re-architect, or rebuild.

All Cloud Environments

All cloud deployment models and layers of cloud services — private, public, hybrid, IaaS, and SaaS — are possible.

DevOps Toolkit

A comprehensive set of preconfigured open source tools help accelerate your move to the cloud, including infrastructure as code, automated testing, container built automation templates, logging, monitoring, and more.

Migration Accelerator Templates

A variety of architecture and design patterns, as well as infrastructure code templates, make your cloud migration efficient no matter what platform you are migrating from.

CloudPath Journey

Assessment: Define the target cloud architecture

Perform capability mapping, skill assessment, cost estimation, TIBCO Cloud Path checklist

Preparation: Generate the plan

Determine optimal delivery approach, define solution components, define communication flow

Execution: Deploy to the cloud

Build and configure the platform and tooling using DevOps toolkit and infrastructure as code templates
