

## Pico Laser

Are you annoyed about your imperfect skin and look older than your actual age? If your answer is yes then its time to say hello to Pico Laser treatment which is the most effective and fastest technology against pigmented lesions and freckles. This is the technology that helps you in getting a more youthful appearance without getting any conventional discomfort and downtime.

According to **Dr. Adam**, a skin specialist and a highly qualified professional in Pico laser having a diploma in Aesthetic Medicine from the USA and Certified from the Malaysian Ministry of health running his very known beauty clinic the **Monette Ansley Clinic in Malaysia**, Pico laser is the most convenient and fastest treatment against almost all the skin problems like sun spots, age spots, melisma, freckles, and acne scars.

Pico laser is a scientifically proven effective, faster, and safer laser treatment that destroys skin discolorations and promotes the production of elastin. Its optimum photomechanical effect shatters all the unnecessary pigments under the skin reducing the number of treatments needed and giving fast and effective results as well.

Pico laser is basically a non-invasive and non-surgical laser treatment of skin focusing only on the problem area and without damaging or hurting any other part of the skin. In this subversive technique, ultra-short pulses of energy are emitted focusing on the problem area. These ultra-short pulses shatter the pigments under the skin that can be removed easily after the laser treatment.

The most effective and plus point of this treatment is that patients only feel mild or no pain and the treatment does not harm the outer layer of the skin as well. In the result of pigments breakdown, collagen production starts for the improvement of acne scars and for skin

rejuvenation. The time period for treatment requires only some minutes. 3-4 treatments are required about 3-4 weeks apart.

As we talk about the side effects of Pico laser than there are no side effects except some time patients face got red for a day after the treatment.

These are some fast facts about Pico laser treatment

- Highly effective and safe method
- Almost Zero pain
- Minimum or no side effects
- Requires very less number of treatments
- Removes almost all the skin imperfections
- Giving no harm to the out layer of skin

Pico laser is becoming the new golden standard for treating pigments, melasma, and freckles. If you want to know that is this treatment is safe for you or not then you can visit any consultant near you. And if you are from Malaysia then you are lucky enough if you get **Dr. Adam** for this treatment.
