Mais j'ai toujours cette fâcheuse tendance à comparer mon corps à ce qu'il était avant quand j'étais plus fine et moins musclée sûrement. Et ça me donne l'impression d'être moins

bien. Et je me pose ces questions:

□ It's possible, but hIGF-1 had to be site injected because of the half-life, LR3 doesn't because it circulates in the blood system, because it doesn't bind to IGF-1 Binding Protein very well. Which means it doesn't stay at the injection site, which means localized growth wouldn't be the same as hIGF-1, if at all.

After FU Friday wod and some push-ups I deserve a beer and so do you come see me tonight at @threeoddgysbrewing. O and it was 4 burpees at the top of every minute and 600m run. □□□

All IGF-1 derivatives play prominent roles in cell division, cell proliferation, and cell-to-cell communication. Though it has similar effects, IGF-1 LR3 does not adhere to IGF binding proteins as strongly as IGF-1. This results in IGF1-LR3 remaining in the bloodstream 120 times longer than IGF-1. IGF1-LR3 gains its prolonged half-life as a ...
