

# Representing 'Pack Robotics

By: Seemani Dash

On October 5, 2018, three SEA and Robotics Club students, junior Philip Ha, sophomore Carlos Martinez, and sophomore Seemani Dash, represented Wolf Pack Robotics at the FabLab in the San Joaquin County Office of Education. They demonstrated this year's game as well as a functioning robot to the President of the University of California, Janet Napolitano. This opportunity allowed our Robotics club to show off our robot and really utilize the hours of hard work spent during the building, designing, and programming of our robots as well as elaborating on the life skills learned through Robotics. After the demonstration, the students then watched a panel of teachers and other school officials ask President Napolitano questions about colleges, science, and other subjects to learn about the science programs in other schools and colleges. They expanded their skills on both presenting and working under some pressure. Our students asked some questions of their own and worked together to depict both West High's Space and Engineering Academy and Wolf Pack Robotics for the high-achieving science academy and club that they are.
