Older individuals often skip testosterone products altogether and use a mild anabolic such as Deca-Durabolin or Equipoise because they offer fewer side effects. The usual dosage of testosterone enanthate is 250 mg to 750 mg per week. This amount will provide you with a very rapid gain of both strength and body weight.

Testosterone Enanthate is a strong and slow acting variant of the testosterone molecule. It is a continuous release steroid used by bodybuilders to improve strength and gain muscle mass. It's a very popular form of testosterone which offers considerable health benefits as well as powerful physique enhancing properties.
