OVERVIEW

111 HARLEY ST.
LONDON

ENDERMOLOGIE®

Endermologie® is a deep-tissue eye, face and body massage treatment used to address cellulite, loose skin, poor circulation, wrinkles and fine lines, and dehydrated skin. It's also an ideal post and pre-op treatment, helping to improve skin quality.

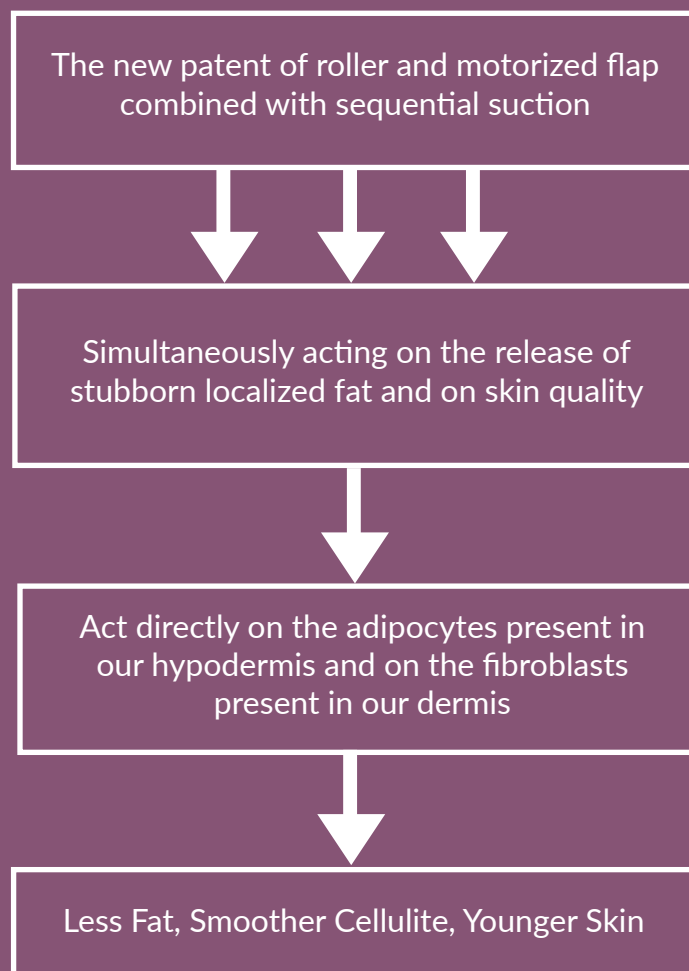

The treatment works by applying pressure, kneading the areas of cellulite. The tool uses a combination of suction, rolling, and pulsating to stimulate the fat locked within the deep tissue. It also works on the lymphatic vessels to boost circulation. As the tissue loosens, fat cells slowly break apart, releasing the tight area and smoothing out the skin.

Endermologie® is also a great treatment to have both before and after surgery such as Liposuction. Before an operation, Endermologie® prepares and softens skin tissue and reduces side effects and complications. It also helps to minimise post-op-pain and stiffness and improves fluids mobilisation. Endermologie® following liposuction or other fat-reduction treatments helps to reduce swelling, reduces the chances of early contours developing, and helps to improve skin tone.

Downtime	No downtime
Sessions required	8-12
How often	Once or twice a week
Time taken	35-40 minutes.

HOW ENDERMOLOGIE® WORKS

TECHNOLOGY

The mechanical stimulation of cells, called Endermologie®, thus reactivates their awakening naturally and painlessly. Using the new exclusive Alliance patent which combines motorized roll and flap, the Endermologie® technique delivers a more intense and precise, yet pleasant stimulation to the skin surface in order to reactivate natural physiological processes in-depth.

Endermowear™

The bodywear that covers the entire body and makes it easier for rolls to slide, optimizes the quality of the treatment, and ensures privacy and hygiene while, at the same time, acting as a lipo-zoning guide. This suit is available in several sizes, in both male and female models.

Body Tip

Face Tip

ENDERMOLOGIE® BODY TREATMENT

Endermologie® breaks apart fat cells deep within the tissue to minimise cellulite and improve firmness. The skin tissues and fat loosen, making the skin appear smoother and tighter. The treatment also works on the lymphatic vessels to boost circulation.

Release fat

Targets stubborn localised fat cells found in troublesome areas such as the arms, back, stomach, waist, thighs, etc. The fat is broken down and ejected naturally.

Reduce cellulite

Triggers 'lipolysis' to release fat tissues associated with this common concern.

Firm the skin

Stimulates fibroblast activity, to boost collagen, elastin and hyaluronic acid, to enhance skin firmness, volume and suppleness.

Improves circulation

Improves the lymphatic system to reduce swelling and water retention and boost overall circulation. Toxins flush from the system naturally.

Boosts recovery

Endermologie® before surgery softens skin tissue, minimises side effects and post-op-pain, and improves fluids mobilisation. Endermologie® following liposuction or other fat-reduction treatment reduces swelling, lowers the risk of unwanted contours developing and improves skin tone.

Visible results after only 3 sessions !

ENDERMOLOGIE® FACE TREATMENT

Endermologie® boosts collagen and elasticity levels to restore facial firmness and volume and reduce wrinkles. By stimulating adipocytes, stubborn fat cells are released, while premature jowls and sagging is improved.

Softens fine lines and wrinkles

Boosts collagen and elasticity levels to neutralise the ageing effects of sun, stress and pollution and soften fine lines.

Clarifies the complexion

Re-ignites the lymphatic drainage system to improve microcirculation and enhance overall skin radiance.

Tightens the skin

Boosts cellular and fibroblast activity to firm and plump the skin and improve the appearance of jowls and lines around the mouth.

Redefines chin and jawline

Uses a combination of suction, rolling, and pulsating to stimulate the fat locked within the deep tissue, and release fat cells under the chin.

ENDERMOLOGIE® EYE TREATMENT

Endermologie® synthesises fibroblast activity to minimise dark circles, pigmentation and puffiness and induces a tightening effect that softens lines and crepiness around the eyes.

Lightens dark circles

Promotes blood flow and circulation to prevent blood capillaries pooling in the area that creates darkness.

Tightens skin

Contracts and lifts the skin to improve the appearance of hooded upper eyelids or crepiness under the eyes.

Reduces puffiness

Eliminates water retention under the eyes to alleviate puffiness.

Smooths fine lines

Elicits collagen production to plump expression lines around the eyes.
