

Connect. Anywhere. 100% of the time.

ABOUT SKYLO

Disruptively affordable, Skylo brings always-on IoT connectivity to machines, sensors, and devices, even where there is no cell coverage. Skylo helps people and businesses benefit from secure connectivity through our Skylo Hub, a rugged modem-sized device that transmits sensor data via Skylo Connect, our always-on network, providing real-time communications. Customers manage operations from the palm of their hand using intuitive Skylo Apps, available on mobile or web, giving teams the ability to take immediate action. Leveraging the NB-IoT protocol for satellite communications, Skylo serves a range of industries including farming, maritime, logistics, energy, and others, enabling SOS alerts, 2-way messaging, location, fuel monitoring, threshold alerts, and more.
