

The best car air filter brands

Buying a car is a substantial purchase, so you want to be sure that it will serve you for a long time. The engine is one of the most important parts when it comes to a car's performance and durability. That's why it's essential to keep the engine healthy.

Frequently changing air filters is the optimal way to keep your engine in the best way possible. A balanced supply of air helps the machine to work correctly. Trapped dust and various particles in air filters ensure the best performance of your car.

There are many different kinds of air filters on the market, so choosing one is not easy. That's why we created our top list of 15 air filters based on price, durability and people's rating.

Before we dive into our list, let's see what are the benefits of using air filters.

Air filter benefits

Preventing the damage: Air filters trap small particles which may cause damage to the engine. You don't want that because the repair of the damaged engine will cost you a lot of bucks.

Engine durability: if you want to extend your car's engine lifespan, change your air filter from time to time for consistent airflow.

Fuel efficiency. Replacing the old air filter in the car will increase the amount of air entering the engine which means that the fuel burns more efficiently and you can save money on the pump.

Low cost and easy installation: The air filter is one of the simplest parts to change, at a great price. You can buy one of the best air filters available on the market for a relatively small amount of money.

TIP - The new engine air filter can increase your vehicle's MPG by up to 10%.

Spearhead Max Thrust Air Filter

Company Spearhead has 30 years of experience when it comes to automotive parts. It's one of the largest automotive aftermarket suppliers in the United States, wherewith the best products at the best prices.

Max Thrust engine air filters will provide a transparent and effective upgrade over stock performance. Its unique Hex-D pleat design creates maximum holding capacity for trapping unwanted dirt and debris. Thanks to multiple layers of progressively finer filter media that allows air to flow freely even when the filter is dirty

Deficient airflow can cause your engine to work twice as hard. That's why Max Thrust air filters are designed to give your engine as much clean air as possible up to 15K miles.

EPAuto GP075 (CA10755)

This affordable air filter is suitable for Toyota, Lexus and Honda cars.

Like other all air filters it's simple to replace and has additional advantages. For example, EPAuto GP075 protects the car engine from dust quite well if you consider its price. The second advantage of this air filter is increased fuel mileage. Its replacement is recommended after every 12,000 miles.

This is a good option if you are looking for a cheap but at the same time quite durable air filter.

K&N 33-2304 Replacement Air Filter

K&N filters are one of the most popular ones in the market. The company made its name for producing high-quality products.

This Uniquely designed, washable and reusable high-flow air filters will last you 10-Year or Million miles, which is very impressive. With Additional Filtering Barrier, it provides long-lasting performance and adds up to an extra 15 horsepower to your engine power. Its design allows easy fitting into the factory air box and needs cleaning every 50,000 miles.

K&A air filter is an excellent choice if you are looking for a quality and durable product out there.

FRAM Extra Guard Air Filter, CA4309

FRAM Extra Guard air filter comes with a great combination of protection and price. It's one of the top-rated products and our most affordable choice.

This replaceable filter is equipped with an advanced filter media that offers more protection than other air filters. The level of protection of the CA4309 is based on a paper grid interwoven with wire mesh. The extra guard air filter is capable of filtering microscopic particles and visible debris from your engine. The grill design maximizes the surface area to collect the most particles that may cause the engine's damage.

By changing this filter regularly, you can ensure that you are getting the most out of your engine at a great price. The company suggests changing this filter every 12,000 miles for maximum performance.

Mann Filter C 43 102 Air Filter

The Mann air filter is known for its dirt separation efficiency and mechanical stability for over 65 years. Like FRAM, it's a pretty famous brand but costs slightly more.

The specially designed paper filter provides good pleat stability and one of the best air-fuel ratios. It is reliable, efficient and can reduce the vehicle's mileage by up to 30 kilometres.

Mann air filter reduces the input noise and protects the adjacent components by sealing them off. While it's made for Volkswagen Jetta, you can also use it for other types of vehicles. The recommended replacement time is after 12,000 miles, but some reviews claim that it can work up to 20,000 miles.

ACDelco A3181C Professional Air Filter

ACDelco Original Equipment air filters are designed, engineered, and tested to strict standards and are owned by General Motors.

These premium air filters are equipped with a tight seal which supplies the cleanest possible air. The most minor airflow restriction guarantees the engine's enhanced performance. They also help protect you and your passengers from harmful pollutants that may come from your vehicle's ventilation system.

ACDelco regularly updates production and service part designs to integrate new materials and technologies. Considering all these factors, we think that this is one of the best quality air filters at a great price.

Cleenaire EAF11712 Engine Air Filter

Cleenaire produces various types of filters, including oil, fuel, cabin and air filters. They make high-quality filters such as the EAF11712 engine air filter.

This high-quality material made filter is equipped with thick rubber seals during production. Because of the incredible filtration system, it captures harmful debris that attempts to enter the engine. For running your engine smoothly, the filter maintains sufficient air circulation.

In modern fuel-injected vehicles, Cleenaire air filter helps increase acceleration by up to 11% and extends the engine's lifespan.

[CHECK LATEST PRICE](#)

Genuine Subaru 16546AA10A Element Engine Air Filter

This Genuine Subaru engine air filter is manufactured from top-quality material while maintaining a low cost. It's a reliable product when it comes to efficiency.

The Subaru filter has a three-layer filter element for trapping various types and sizes of particles, including dust and debris. This prolongs engine lifespan. Other advantages of this filter are fuel efficiency, low noise and better performance.

The filter can effectively run for up to 30,000 miles.

[CHECK LATEST PRICE](#)

ECOGARD XA4878 Premium Engine Air Filter

ECOGARD engine air filter guarantees that your car engine gets clean and efficient air intake for enhanced performance.

This universal air filter is specially manufactured and tested to be used with Ford and Lincoln models for increased productivity. The biggest advantage of this filter is that it's cheap and easy to install. However, its shape is slightly different from the original air filters, so it may be challenging to fit into the compartment.

It's recommended for this kind of air filter to change it at least every 12 months or 12,000 miles.

[CHECK LATEST PRICE](#)

FRAM TGA8755A Tough Guard Flexible Panel Air Filter

Fram Tough Guard is the best option out there if you often drive in dirty areas.

The advanced design of FRAM air filter allows it to capture and hold double the dirt than other regular filters. Because of that, the engine is cleaner in extreme driving conditions. A heavy filter screen provides greater integrity and reduces the possibility of collapse and tearing.

12,000-mile change intervals help to avoid decreased acceleration and horsepower while improves overall performance

[CHECK LATEST PRICE](#)

Purolator A26280 Advanced Air Filter

Purolator is a well-known brand on the market for a long time. They adore the high quality and strive to keep vehicles running like-new car for a long time.

This Multi-fiber, high-density air filter will trap up to 99% of the dirt and other debris. Rubber gaskets provide a secure seal to guarantee that only fresh air reaches the car's engine.

For the best performance and efficiency, the recommended change for these air filters is every 12 months or 12,000 miles.

[CHECK LATEST PRICE](#)

When is the time to change the air filter?

Since the air filter traps harmful particles and other internal components in the engine it is recommended to replace the filter every 12,000 to 15,000 miles or more. However, this also depends on your driving conditions. For example, if you are driving in a dirty, harsh area, it is best to change the filter every 8,000 miles.

Replace the filter If you encounter any of the following problems:

Dirty air filter. It's obvious that if your filter looks darker than usual, it's time to change it. Sometimes the inside layers will have dirt that is not easy to spot. So checked them too.

Reduced fuel consumption. Pay attention to the gas mileage of the car. A common symptom of a dirty filter is reduced fuel efficiency. When the filter gets dirty, less air enters the engine, and the engine uses more fuel to produce enough power to compensate for this reduction.

Engine failure. If your engine does not start easily, it may be due to a dirty filter. The filter blocks the amount of air entering the engine. As a result, the air/fuel mixture becomes too rich, contaminating the spark plugs and causing engine damage. In some cases, it may even lead to complete failure.

Unusual engine noise. If you notice that the car makes strange vibrations or struggling noise when idling, it's maybe time to replace the engine air filter. An unusual engine sound happens when a clogged air filter damages the spark plug. If it does not respond as usual by pressing the accelerator, or if it feels rapid movement, it may mean that your engine is not getting enough air to perform optimally. In this case, check the filter and replace it if it's dirty.

How to change the air filter

Stop the vehicle on level ground and apply the parking brake. Engage first gear (manual transmission) or park (automatic transmission) and turn off the ignition switch.

Open the car hood. Loosen the engine cover with the control lever in the engine. Move the outer hood latch to release it completely. Lift the hood and secure it with support rods (if necessary).

Find the air filter case. Older cars with carburettor usually put the filter under a heavy round plastic or metal cover. Newer vehicles often have a square or rectangular air filter housing that is slightly off-centre between the grille and the engine.

Remove the air filter cover. Some models have wing nuts. Other air filters only need to install a quick-release system. Just remove the filter cover. If you are not sure how to lift the cover, please consult a mechanic.

Clean air filter housing. Connect the air hose to the compressor and use the compressed air to blow out the dust, or use a vacuum cleaner to suck up any dirt.

Replace the filter. Change the old filter with a new one. Just place its rubber edge up and slide it into the main body. Make sure everything is covered well.

Replace the air filter cover. Carefully slide the cover back into the air pipe, and then push the entire part into the lower half of the air filter assembly. Make sure it is straight and strong.

The filter must be replaced once a year. If you are driving in a dusty place, you will need to change it more frequently. The owner's manual or regular maintenance guide should contain recommendations for your vehicle.

Our final conclusion

Our choice for the best overall air filter is the [K&N engine air filter 33-2304](#). The durable material, good price and the possibility to use it over and over again, which will save you money in the long run.
