

CHEMICAL PEELS REVEAL FOUNTAIN OF YOUTH

For many years, people have searched for that one something to make them look young again. The fountain of youth for younger looking skin is not hard to find anymore. Whether a smoker, sun-worshiper or someone with hypersensitive skin, chemical facial peels reveal the softer, smoother, younger looking skin hidden beneath wrinkles, acne scars and dry, flaky skin. At M2K Internal Medicine in Lexington, Jane Grigsby, who specializes in corrective skin care, will create a skin care regimen tailored to each individual's skin care needs.

“Just as a snake sheds old skin as it ages, chemical facial peels force skin to rejuvenate itself, revealing younger, smoother skin underneath. As we age, our skin stops producing collagen and new cells, therefore the outer layer becomes environmentally exposed and damaged. Chemical peels, however, reverse collagen and cellular levels thus forcing skin to shed old cells. Peels help the skin to work like it did when we were teenagers by normalizing the pH level of the skin and forcing into a rejuvenation process.”

Three types of peels used at M2K Internal Medicine are the Glycolic, Lactic and Salicylic. The Glycolic and Lactic peels are the actual physical removal of dead skin cells. The salicylic, however, penetrates skin layers in one application without physical removal! Each skin peel procedure is followed up by an at-home skin care regimen. The peels are 100% FDA approved, safe and excellent for anyone looking to improve damaged skin. Jane Grigsby treats mostly adults, but also treats teenagers with acne-prone skin. Ms. Grigsby says the most commonly asked question by patients is “What is my commitment?” The only commitment involved is attending a 45-minute training session in the office, then following up with the at-home skin care regimen twice a day for 2-4 weeks. The cost is a minimal \$150 to purchase the kit (lasts 3-4 months) and it comes with a 100% money-back guarantee. The most effective treatments are those that are combined with vitamins containing anti-oxidants.

Don't put off until tomorrow what you can peel off today! Call Jane Grigsby of M2K Internal Medicine at (000) 000-0000. The Fountain of Youth for younger looking skin is just around the corner, so schedule your consultation today!

CHEMICAL PEELS REVEAL A YOUNGER YOU

Q: I work outdoors a lot and have noticed a drastic change in my skin. I've developed wrinkles, age spots and dry, flaky skin. Is there something I can do other than a facelift to look younger?

A: Due to medical advances in skin rejuvenation techniques, facial micropeels force the skin to rejuvenate itself, thus increasing collagen production and shedding old skin cells. Wrinkles, age spots and dry flaky skin may all be reversed through this painless, non-surgical procedure. Jane Grigsby of M2K Internal Medicine specializes in corrective skin care through facial micropeels. "The treatment is tailored to the individual patient's needs based on their skin type, whether acne prone, sun damaged or hypersensitive."

Facial micropeels were developed to combat a variety of skin problems. The treatments are simple and inexpensive and are a great alternative to surgical facelifts. Treatments are performed in the office and are followed-up by an at-home facial regimen twice per day for 2-4 weeks. "The most commonly asked question is 'What is my commitment?'" The only commitment involved is \$150 for the at-home treatment kit and persistence in maintaining the treatments. When compared with the thousands of dollars spent on facelifts, which can also be painful, facial chemical peels are the most economical, non-invasive way to go!

If you are in search of a younger you, call Jane Grigsby of the M2K Internal Medicine Center today at (000) 000-0000. She will schedule a skin consultation and have you on the way to smoother, younger looking skin. This is a corrective treatment with a 100% money back guarantee! Don't delay; a younger you is just a peel away!
