**TECHNOLOGY** 

## Call of the wild

You've spent all day in the back of a Land Rover, peering through binoculars and trying not to move a muscle while you listen for distant roars or paws crunching through undergrowth... yet you've barely seen a single mammal. Sound familiar? This the best time of year to go on safari, with wildlife migrations in full swing and dry conditions allowing plenty of visibility. We can help you guarantee you'll never have a day on safari without an animal sighting again with a little help from technology. Download these apps onto your smartphone or tablet, and start tracking like a pro.

Namibia Etosha App - Namibia

**Explore Etosha** 

National Park like a professional safari guide with this navigation app. An interactive map (which is available offline) leads you to waterholes throughout the park – and when you get there, detailed information on the park's mammals is stored on the app. apple.com

October hails the beginning of the short rains in Tanzania's Great Rift Valley, feeding livestock, wildlife and indigenous hunter-gatherer communities. Terrat – a town near Tarangire National Park, where travellers flock to see the annual wildebeest migration - is home to a Maasai community who use land for grazing their cattle. Not long ago, the community was in conflict with neighbouring farmers, but today it's a peaceful place. This is largely thanks to the Ujamaa Community Resource Team (UCRT), which seeks to improve the lives of Tanzania's Maasai people by helping them to co-exist with their rapidly developing environment. UCRT created a land-use policy in Terrat in 2018, while also empowering Maasai women to own land, which is uncommon due to tribal traditions of early marriage and inheritance rights. "Land is life," says community member Lea.
