

Your prostate cancer journey is *personal*.
Genomic profiling makes personalized treatment *possible*.

What is genomic profiling?

Comprehensive genomic profiling is an innovative testing method that gives you and your doctor deep insights into your genes and disease, allowing you to make better treatment decisions.

HALO Diagnostics has partnered with the Genomic Testing Cooperative (GTC) to make this service available to the patients we serve. By coming together, we can help you on every step of your unique healthcare journey – from detection and diagnosis to prognosis and treatment.

Deeper insights, better treatment decisions

Highly Personalized Testing

Cancer is a genetic and genomic disease. It develops when mutations occur in your genes – inherited from your family (genetic) or acquired through viruses, lifestyle choices, or exposure to substances such as tobacco and pollution (genomic).

By understanding what's happening at a genomic level, your doctors can provide you with better, more personalized care. HALO Diagnostics now offers comprehensive genomic profiling, a testing method that gives you deeper insights into your tumor, its aggressiveness, and abnormalities.

Rapid Turnaround Time

We provide comprehensive testing, including DNA and RNA molecular profiling, to correctly diagnose your disease, guide your treatment decisions, and reduce your time to treatment.

Affordable, Accessible Care

Medicare and many other commercial health insurance plans pay for our tests. Your responsibility will depend on the type of insurance coverage and benefit design of your policy, which may include a co-pay, deductible, or co-insurance.

GTC will bill your insurance company directly and work with them to process your claim and any necessary appeals. Our patient financial assistance program ensures all patients can access comprehensive genomic profiling, regardless of financial status.

We anticipate that less than 5% of patients will receive a bill from GTC, with average out-of-pocket costs less than \$300.

About HALO Diagnostics

HALO Diagnostics is changing how healthcare happens – from early detection and diagnosis to prognosis and life-saving treatment of top diseases. We guide our patients on every step of their unique journey, seamlessly bringing together precision diagnostics, focal-guided therapies, and pioneering technologies under one powerful platform.

Our globally recognized, multi-specialty team of providers includes board-certified radiologists and urologists, as well as renowned researchers and engineers. As a managed service organization, we wholly own our service lines, labs, technologies, and imaging centers, allowing us to provide a comprehensive, one-stop experience for referring physicians and their patients.
