

# HOW ROGUE SCIENTISTS STOLE GOD'S AWESOME POWER TO PRODUCE...

# THE IMMACULATE CREATION

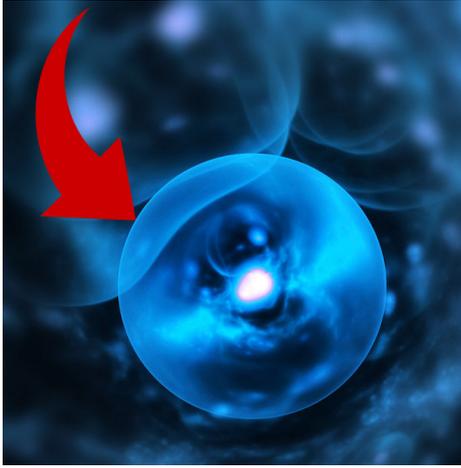

Dear Reader,

## Meet Synthia:

Synthia was born to praise from both the Vatican and the White House.

To put it simply, Synthia is the world's first *synthetic* cell, born not from procreation, but from scientists who decided to chop up and rearrange bits of genetic code...

Now, you may be wondering WHY scientists would go to such great lengths to create new life forms from scratch, but imagine this...

Imagine creating a brand new, microscopic form of life that could...

...live in algae... swim around... soak up the sunlight... and *urinate automotive fuel*.

Or imagine a life-form that could breathe in China's most polluted air... and exhale *pure oxygen*.

This is the awesome power and promise of Synthia's creation.

The ability to create and develop life from scratch – designed specifically to fix many of the greatest problems of our time.

For that amazing reason, *that's why* Synthia has been dubbed “The Immaculate CREATION.”

Now I'd like to warn you right away, some of what you'll read in this letter might be offensive to many people.

Some will find it outright blasphemous and may even hate me just for talking about it...

But what I want to share with is so important, that I'm ready to endure the backlash and the hate mail... if it means I can get this into the hands of people who will use it wisely.

The spiritual and philosophical implications alone are mind boggling, and certainly important...

But this letter is concerned more with the economic impact of this technology, and how its advancement could help everyday Americans, or even people all over the world, become wealthy – while living better, longer, healthier lives in the process.

And this technology certainly has the power to do all those things.

For once you unlock God's code – the building blocks of life, our own DNA – then you can “program” life to execute pretty much any function you can imagine.

Try to imagine for a second what the world might look like if:

- ✓ Plentiful nutrient-rich foods were available to everyone, whether they lived in the inner city or in the middle of a desert...
- ✓ Necessary, life-saving vaccines could be produced en masse, for the entire world to benefit from, on location and at almost no cost...
- ✓ Synthetic biofuels could be produced by engineering algae to turn sunlight into oil that could then operate anything from a car to lawn mower...

And for people like you and me... people who invest our money in the hopes of return... then the difference between going broke and becoming wealthy in this radical new world dependeds on a single word...

# Knowledge

That's why, if you currently invest or have an interest in the American stock market, you need access to the information and ideas covered in Juan Enríquez's new book, ***Evolving Ourselves: How Unnatural Selection and Nonrandom Mutation are Changing Life on Earth***.

Inside, Juan provides you with a virtual roadmap of the future, including an inside look at the winners and losers in the tech battles of the future. For example...

- ✓ What happens to oil companies when we're creating life from scratch with its sole purpose to fuel the world... outside of traditional sources like oil?
- ✓ What will happen to big drug companies when new DNA-based editing technology allows us to completely ERASE some diseases from our germ lines? Will the drug companies that millions of older Americans now depend on go bust? Or will they adapt, invent and thrive as we DELETE many diseases that kill us today?
- ✓ What will happen to the U.S. Government -- and entitlement programs, like Social Security -- when life extension technologies blow up our actuarial tables... pushing the average American age up from the low 80s to 90... 95... even 100 years old? Will you outlive your money? Or reap the rewards by investing in amazing new biotech discoveries that are driving up life spans?

These are the most important questions of our time.

And that's why we've partnered up with Juan to get his book into the hands of as many interested parties as possible. So I've used my considerable influence to do the only thing that really seemed to make sense...

## **Offer Juan's New Book for FREE to ANY U.S. Resident**

In addition, I've worked with my hand-picked tech team to create an investment deal that's unlike anything else in the world...

It's a way to position your wealth ahead of every important life science breakthrough of the future... starting with just a small \$250 investment.

To take advantage of this unique investment deal that I'm recommending for you:

- ✓ You DON'T need to be an accredited investor

- ✓ You DON'T need a lot of money to get started (just \$250 can get you started)
- ✓ You DON'T need to lock your money up for years (you can buy in and sell out any time you choose – I put you in complete control)

All you DO NEED is the access that I'll give to you today. Once you have access to this deal, you can claim an investment in all the world's most important breakthroughs:

- ✓ The world's bleeding edge DNA editing companies...
- ✓ The companies harnessing the power of our own bodies to eliminate cancer...
- ✓ The space race companies that will help us live on Mars...
- ✓ And so much more.

I fully believe that just a small starting stake of \$250 could soon return 5x... 10x... and even 20x your money.

Though nothing in the investment world is guaranteed, and it may take years to see these kind of gains, I believe this is your best chance at seeing extraordinary profits from technology innovation.

And no, the investment I'm talking about isn't a stock. It's not an ETF. It's not a mutual fund of any type. It's not an option. And I bet it's nothing any financial advisor knows about...

Instead it's something that I've personally prepared... for those who that are serious about the trends that will soon shape the world.

More details on how to be among the first in the world to claim a stake inside this deal in just a moment. First, you may be wondering...

## **Who Is Juan Enriquez and Why Do I Believe His Book Is So Valuable I'm Willing To Send It to You FREE?**

While many people know Juan Enriquez as a best-selling author and a five-time speaker at the famous TED Talks, Juan's experience in the field of biotechnology actually spans decades.

Fortune magazine profiled him as "Mr. Gene", thanks to his role as the director and founder of the life-sciences project at Harvard Business School.

Seed Magazine picked Juan's ideas as one of fifty that "shaped our identity, our culture, and the world as we know it."

Juan was also part of the world discovery voyage lead by Dr. J. Craig Venter, the man who basically beat the U.S. Government in the race to decode the human genome. On that voyage, Juan and Dr. Venter discovered more than 6,000,000 new genes and thousands of new proteins.

Now, Juan's currently Chairman and CEO of Biotechonomy LLC, a life sciences research and investment firm where he researches and invests in biotech start-ups.

Put simply, there's no better man on earth that stands at the intersection of life sciences and economic revolution. But the most important thing you need to know about Juan is this:

## Juan Often Identifies Technology Trends That Could Make You Rich

He has an uncanny knack for recognizing what's coming, long before most people even know to look for it.

And it's because of this incredible talent that his brand-new book, *Evolving Ourselves: How Unnatural Selection and Nonrandom Mutation are Changing Life on Earth*, provides a "roadmap" that savvy investors can follow to collect unprecedented wealth as the future unfolds.

What type of future? Let me show you...

## The Amazing Future of Editing "Life Code"

*Imagine a future...* where cancer simply doesn't exist. It's gone completely.

*Imagine a future...* where many terrible, crippling genetic diseases are wiped out of our germ lines.

*Imagine a future...* where heart disease isn't treated with pills, surgery or expensive treatments, but edited out of our genetic code.

*Imagine a future...* where healthy life spans rise to 90 and above, giving you more of the most valuable commodity on earth – more *time*.

**More time to spend doing the things you love, with the people you love.  
More time to work. More time to play. More time to relax.**

Welcome to the benefits of our new found ability to rewrite “life code.”

And it's happening right now...

Quietly in laboratories in all over the world...

Salk Institute for Biological Studies, Duke University, Columbia University Medical Center, Johns Hopkins and Harvard Medical School are all editing life code as I type this message to you.

These scientists and entrepreneurs used to edit the 1s and 0s of digital code to deliver to us breakthroughs in computers, the internet, and satellites.

Now they've switched their attention to editing LIFE'S CODE.

By breaking the code of our DNA (G-A-T-C), we're now starting to develop technologies that allow us to re-write that code however we see fit.

What that means for us and future generations is so incredible, it's almost beyond belief...

Instead of trying desperately to find cures or treatments for things like cancer, diabetes, schizophrenia, MS, Huntington's, Alzheimer's... the list goes on and on...

We may soon be able to simply ERASE the genetic origins of these conditions and diseases, drastically reducing their occurrence in the general population.

See, our DNA shapes us all. The order of those four letters (G-A-T-C) define us. They give us brown vs. blue eyes. They make our skin pale or brown.

And unfortunately... they give us disease.

But a radical new future awaits us in editing this DNA.

Now, if a piece of genetic code is out of place – giving us the propensity to develop cancer -- you should eventually be able to rewrite that DNA... and correct the cancerous mutations in our genes that ravaged our bodies in the past.

This isn't a fantasy. And it isn't a hundred years away, either.

Thanks to a new discovery known as CRISPR(or clustered regularly interspaced short palindromic repeats), the world of gene editing is opening up dramatically...

Parts of the process of gene editing are becoming so simple, high school students can take part in annual competitions to see who can most creatively manipulate life code...

Now, it's just a matter of perfecting it...

One scientist even used a similar process to create what he calls the “Immaculate Creation” – the world's first life form synthesized in a lab.

He named the creation, “Synthia 1.0”

And he made this new life form not with the procreation of two animals, but by editing and writing LIFE CODE.

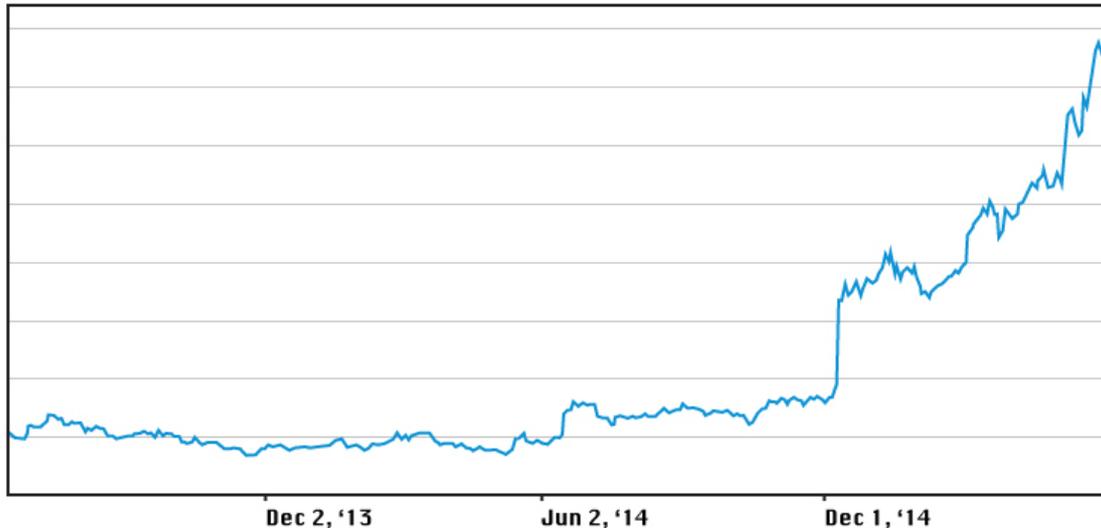

Think about that...

Life... programmed from scratch. In a laboratory.

Already, the market has begun to realize the power and profit promise of these amazing technologies...

One company, Bluebird Bio Inc. (BLUE), a developer of gene therapies that aim to repair the genetic defects at the root of rare diseases, went public at \$17 per share in June, 2013.

Now, shares of BLUE are trading for \$154 -- an increase of more than 500% in just two years.

That means a \$5,000 investment in just this ONE life-editing company could have returned more than \$30,000 by now... with plenty of room for additional growth.

And this is just a *single* example of the fortunes that can be made by early adopters of these amazing technologies.

Now, it might be too late to late to profit quickly from this particular company, but don't worry, because...

## **The Good News Is... We're Just in the First Innings of This LIFE EDITING Ball Game**

Which is why it's so important for you to get your hands on Juan's new book as soon as possible.

In just a minute, I'll show you how you can request a FREE hardcover copy. But first it's important that you understand that this isn't just a long essay filled with wild speculation...

No, this book was written by an expert... a pioneer... a visionary who, though not well known to the general public, is spoken of with deep respect and admiration by those who understand and follow the work he's doing.

- ✓ **So when he says that people may no longer die from many cancers a decade from now, folks from Johns Hopkins, Harvard and the world's most prestigious labs sit up and listen...**
- ✓ **When he claims that Alzheimer's may someday be a thing of the past, some of the smartest scientists in the country want to hear what he knows...**
- ✓ **And when he claims that the world as we know it will shift in the coming decade, smart investors would do well to heed his advice.**

And that's where his new book comes in.

At 361 pages, it covers some the world's most important trends - from erasing autism to the controversial idea of stealing God's awesome power to create virtual immortality, all in simple, easy to understand language.

And along the way it provides a kind "roadmap" you can use to spot the most lucrative opportunities in the market, long before the big fortunes are made.

For example, here's another idea Juan's shown me... that I think you'll find fascinating as well...

## **Click. Print. Bladder, Trachea, Ear.**

It's no secret that 3D printing has already changed the world...

Now we print everything from guns to rocket engines.

In fact, you can purchase a 3D printer from Staples or Home Depot for less than \$1,000.

And already, shares of one popular 3D printing company are up 55%.

But something even more amazing is just starting to become possible thanks to the rapid growth of this technology...

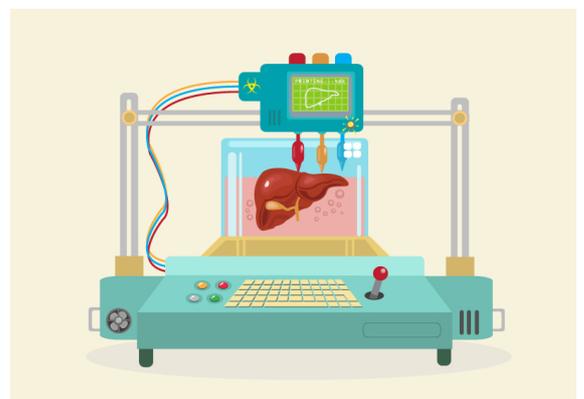

We are now learning to 3D print human *organs*.

We have already printed simple structures like skin and even a human trachea.

But the reality of printing complex organs like hearts and kidneys may be just around the corner.

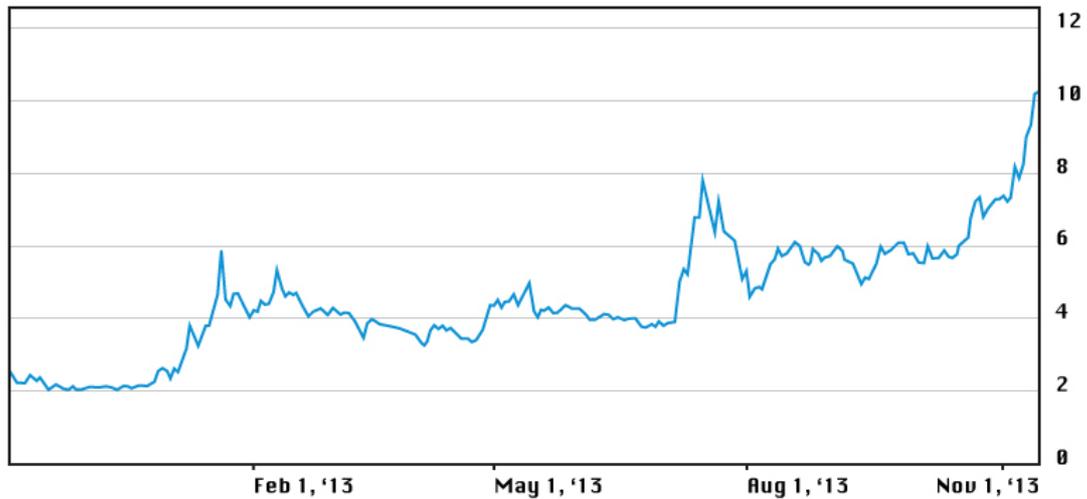

And as 3D printing becomes an everyday reality in the coming decades, not only will hundreds of thousands of lives be saved, but also countless companies and individuals will gain incredible wealth...

Here's the kicker...

There's already a publically traded company that you can buy right now – through ANY brokerage – that gets you a front row investing seat to ride this trend to new wealth.

Already they've had an amazing run...

And that's because early investors see the awesome power and promise in the technology...

In fact, one of the first 3D printed implant was given to a 6-week-old boy back in 2012, saving his life by preventing his faulty airway from collapsing.

That was just a few years ago and now, researchers are confident about producing segments of bone, muscle and cartilage within the next five to ten years.

Not long after that, I suspect we can look forward to hearts, livers, kidneys... possibly even eyes.

Consider...

An American dies every hour waiting for an organ transplant.

Now imagine a world where that is no longer an issue...

- ✓ No more waiting and hoping for an organ that may never come...
- ✓ No more chance of your body rejecting the organ that was supposed to save your life...
- ✓ And no more fear of having to repeat the whole process five or ten years down the road when the new organ wears out...

And these are just the life *saving* implications!

Hard to imagine the benefits we could all get from having the ability to order up brand new, genetically identical organs at will.

These are types of things Juan explains in his new book...

# And If You Provide Me With a Valid U.S. Mailing Address, I'll Send You Juan's Book for FREE.

My only request is you agree to sample our research in *Technology Profits Confidential*.

By the way, my name is Stephen Petranek. I'm the Chief Futurist for Agora Financial.

Before this, I was the senior editor for science at *Life* magazine for six years.

I spent another nine years running the Sunday magazine for *The Washington Post*.

I also spent eight years as Editor-In-Chief for the world's most popular science publication, *Discover* magazine.

And... like Juan... I've also been a three time speaker at the world famous TED talks.

I'm also well known for some investigative journalism I did exposing an unscrupulous company's fraudulent activities.

So you can believe me when I tell you I'm a card-carrying skeptic.

I approach any situation I research with a raised eyebrow and a need for overwhelming proof.

And if you know of Agora Financial or are familiar with our work, you know we have a proven history of accurate "big picture" predictions about the economy.

As one of the world's most accurate financial analysis firms, maybe you've heard of us.

We've predicted every major economic event of the past decades with bull's-eye-like accuracy. From the fall of the Berlin Wall back in 1989 to the dot-com blow up of the early 2000s.

In one of our three New York Times best-selling books, we predicted the demise of the dollar and the explosion of public debt.

We also correctly predicted the housing crisis of 2008... the recent rise of America's new oil revolution... and the amazing breakthroughs in stem cell research and immunotherapy treatments.

Not only did we predict these events, we showed the readers of our research how to profit by positioning themselves ahead of these trends.

Specifically, my beat is to cover transformational technologies — something I've been deeply passionate about for most of my life.

And I'm fully convinced we're right at the cusp of yet another technological revolution.

I believe so strongly that Juan's new book can help you thrive, that I want to give it to you FREE.

But the book's about much more than just investing...

If you own a business, then reading this book will help keep you, your business and your money from getting blindsided by the next wave of technological disruption.

If you, your kids or your grandkids are looking for jobs, then this book will show you the skills that are bound to be the most valuable in the future.

And if you're looking to "make a dent in the universe," then this book will show you where to focus your entrepreneurial skills in the next decade and beyond.

Put simply, this book gives you the knowledge to stay on the winning side of the most important futuristic trends.

But instead of me trying to convince you about how crucial this information is for you and your family — I've arranged it so you can see it all for yourself firsthand.

In other words, instead of asking you to trust me when I tell you how great this book is...

## **I'll Put My Trust in You First, By Giving You This Valuable Book FREE, So You Can Make Up Your Own Mind...**

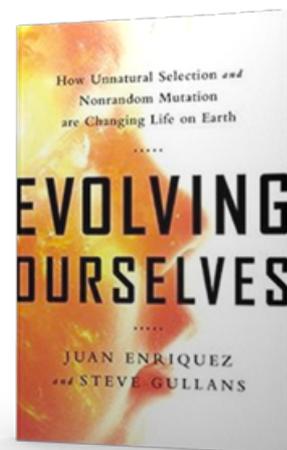

I can do this confidently because I know the value of this information. I believe in Juan's work so completely that I've already repositioned much of my research service's model portfolio around the ideas and breakthroughs he discusses.

And that's why I want to offer you a copy of this book FREE. Again, all I ask is you sample the rest of the technology research I want to send your way.

But also, because I want you to be as prepared as possible, we've worked to put together a series of bonuses that are only available through this exclusive offer.

These special reports detail specific steps you can take, as early as tomorrow, to act on the trends outlined in the book for a chance to make incredible gains as the market begins to recognize the life changing, and cash generating, potential of Juan's predictions...

We've prepared three bonuses that I'd like to send you as a special gift when you reserve your FREE copy of ***Evolving Ourselves: How Unnatural Selection and Nonrandom Mutation are Changing Life on Earth*** today...

## **FREE Bonus #1: A Deal to Play All The Hottest Trends Described in This Breakthrough Book**

Earlier, I mentioned to you that I setup a deal for my most serious readers...

It's not a stock, and not a bond. But a specific investment unlike anything else on the market – one my technology team CREATED that automatically...

- ✓ Gets you into more than nine of the hottest tech companies of the future...
- ✓ Instantly diversifies your wealth across all the themes in the book....
- ✓ Grants you the proper asset allocation in all of these deals...

You won't be able to find this investment on any exchange, in the U.S. or abroad. And don't bother asking your broker what this fund is – I bet no fund manager or broker knows how to give you access either.

Put simply, access to this deal is available to serious individuals who choose to take advantage of this FREE book offer...

And the best part is...

I wanted to make sure every single American – no matter their net worth or personal connections – could ride alongside these trends...

So this deal is set up in a way that just \$250 gets you started.

Now, to be crystal clear, these aren't Juan's recommendations.

Instead, these come directly from me and my team of researchers – built off the back of his predictions and views of the future.

Inside the fund, you find only the most cutting edge companies in the biotechnology industry:

- ✓ **One company that's using a revolutionary technology known as, "zinc finger protein transcription factors" to edit and treat crippling diseases like ALS and more...**
- ✓ **Another company that's using genetic engineering to potentially reverse the damage of a faulty gene, reversing inherited blindness... and to treat debilitating diseases like hemophilia...**
- ✓ **A company that has already succeeded in training our own bodies and cells to identify, attack and kill cancer from within, the first major step toward a world virtually free of cancer...**
- ✓ **Another that specializes in what I call "iCells", a breakthrough new way to kill even the deadliest diseases of our time with a single, pain-free injection that's so safe, it could be administered by a nurse...**

- ✓ **One company that plans to attack and erase heart disease, possibly saving millions of people around the world from humanity's number one killer... no more heart attacks or heart failure again...**
- ✓ **And multiple companies that are on track to eradicate every type of cancer, from pancreatic and ovarian to prostate, lung and even leukemia...**
- ✓ **And many, many more...**

If just one of these investments works out... and if just one of the technologies breakthrough in a way that I expect them to... we could realistically see gains of 100% - 1,000%.

And that's if just ONE of these work out.

Yet here's the amazing thing...

Your single \$250 investment in this deal spreads your wealth around to more than nine total breakthrough companies.

That's nine chances to strike it rich. Nine companies that could soon change the world, and your wealth, in ways most investors don't see coming.

I've personally allocated each of the investments in the nine companies with my recommended weighting, too. You'll be automatically diversified across all the amazing breakthrough possibilities... but once you get started, you have the option for complete control. You can decide for yourself which companies to add and which companies to drop.

Put simply, this is as turnkey of a setup as possible.

Of course, you're not limited to just a \$250 investment...

This deal is structured so you can choose to invest more if you like, too. So a \$10,000 investment still has the same 10x style profit potential.

But first, let me be clear...

Even though we've handpicked every move listed in this special deal... using our own proprietary research filter... we do not own this deal ourselves.

A secure third-party firm handles everything.

We get no commissions or sign-up fees on any new accounts.

We get no special benefits for creating the account.

All we get is the satisfaction of knowing that -- for the first time ever -- we can show you an easy way to make all our favorite plays in one easy, low-cost move.

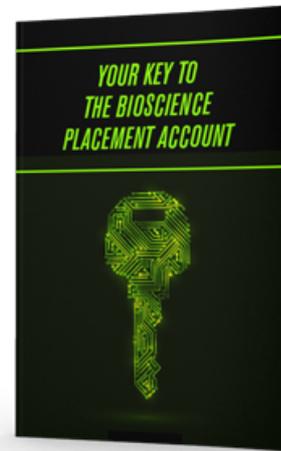

This keeps us completely unbiased.

And, in short, I have the private link that gets you in.

Given my connection to the financial world, I could sell access to this investment alone... and collect huge Wall Street style fees.

But instead, I'll simply give you all the details about what this deal is... who to call... what to say... and how to get started... in your second FREE bonus called, "**Your Key to the Bioscience Placement Account.**"

There's more to this offer, too...

## **FREE Bonus #2: "Battling the Superbugs: Getting Rich on Penicillin 2.0 and Beyond"**

There's another huge health threat we all face.

*I'm talking, of course, about the coming scourge of drug-resistant "superbugs."*

As one scientist recently puts it, over in the UK...

**"It's impossible to say how many people will be affected, and whether it will be days, weeks, months or years, but it's going to happen – there will definitely be people that will get untreatable infections."**

But here at **Technology Profits Confidential**, we've got our eyes on a company with an answer. It's a tiny firm that's stumbled upon a powerful new antibiotic.

This new disease-killing drug is so effective, it can beat drug-resistant pneumonia. That's a huge feat. Yet it's so safe, they're testing it right now for use with children.

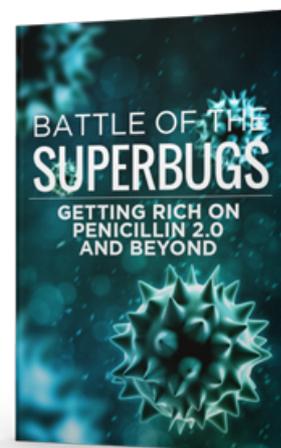

With FDA approval, this "penicillin 2.0" breakthrough could be worth a fortune. You could easily see a triple or quadruple return on every invested dollar.

Here's the kicker: This company's drug is already in Phase 3 trials.

If I hear from you within the next 24 hours, I'll rush you a copy of a brand new, never-been-released research report called, "**Battling the Superbugs: Getting Rich on Penicillin 2.0 and Beyond.**"

Inside, you'll also discover a company that's just "cracked the code" on viruses.

The therapy they're working on could be up to 1,000 times more effective than anything we've seen so far. And this, too, is also cruising through FDA trials.

It's all in your free copy of "**Battling the Superbugs: Getting Rich on Penicillin 2.0 and Beyond.**" Which I'll send you with everything else.

Just so long as you agree to a free trial of **Technology Profits Confidential**.

## **FREE Bonus #3: Year Long Risk-Free Access to My Recommendations, Insights and Analysis**

Because I believe you need more than just a manual to truly capitalize on the earth shattering trends taking place right now, I'll also include ongoing help and assistance through our monthly technology newsletter – **Technology Profits Confidential**.

Inside the pages of this members only newsletter, you'll find insights that the mainstream news isn't covering – things like:

- ✓ Breakthrough new cancer treatments...
- ✓ The REAL way to play the rise in mobile computing...
- ✓ The truth behind the fortunes being made in the Internet of Everything...
- ✓ And much, much more.

You'll be completely up to date on what's happening on the bleeding edge of technology, the best investments to make as emerging companies begin to grow on an exponential scale... along with actionable ways to maximize your portfolio's potential.

From 2011-2014 our **Technology Profits Confidential** model portfolio has returned 42% annualized gains.

Consider...

A 42% return over ten years would have turned \$5,000 into \$310,321.58 over ten years...

It would have changed that same amount into \$2,444,741.62 after fifteen years...

And in 20 years, it would have transformed \$5,000 into \$19,259,896.75...

Sure it would require perfect timing to roll your profits like this, and luck to consistently hit only winners, but even a fraction of these type of gains could be life-changing.

What's our "secret" to these amazing gains? Being on the right side of technological disruption.

So just to summarize...

When you take advantage of this exclusive offer you'll claim:

- ✓ A FREE copy of Juan's new book (a \$28.91 face value)...
- ✓ Access to **"Your Key to the Bioscience Placement Account"** which shows you all the details on the deal to play ALL the ideas you'll find inside the book in one simple click of your mouse...
- ✓ Our brand-new **"Battling the Superbugs: Getting Rich on Penicillin 2.0 and Beyond"** investment research report, where you'll discover which breakthrough companies could have penicillin 2.0.
- ✓ And a year long trial to our monthly technology newsletter, **Technology Profits Confidential**.

**ALL FREE WITH YOUR RISK-FREE TRIAL OF THE TECHNOLOGY PROFIT  
CONFIDENTIAL**

## **It's Important to Remember: The Biggest Money Has ALWAYS Come From Investing in Technology That Powers the Future**

From Microsoft's amazing 45,000% rise since it went public...

To Apple's ascent to the largest company in America...

And Google's wealth wave, delivering early investors more than 9 times their wealth!

Breakthrough technologies can create fortunes for those on the right side of the trends.

By saying yes today you'll get everything we talked about for just the laughably cheap \$49 annual charge.

**We want you to be 100% Satisfied  
with your *Technology Profits*  
Confidential Subscription.**

If, for any reason, you are not completely satisfied, simply let us know. Anything you've already received will be yours to keep. Our guarantee ensures you a full refund within the first year of your subscription -- no questions asked.

**And you are under no obligation to buy anything else from Juan or myself in the future.**

I'm giving this package away FREE (and actually losing money) for two very important reasons.

- ✓ Number one, because I've spent practically my entire working career making sure everyday Americans stay ahead of the tech revolution that will change the world...
- ✓ And number two, it's my sincere belief that once you see the excellent research we have and how it's everything I've promised you (and more), that I'm betting you'll want to hear from us long term and that we can very soon count you as one of our 700,000 subscribers.

If what we have to show you makes sense to you, then great, we hope you'll continue to receive my newsletter in the future...

If not, then you can simply cancel with no hard feelings. . I'll send you every single cent of your year long trial back. No questions asked.

But at least you will have gotten a chance to see our work ... to read about the exciting, and sometimes frightening, changes that are taking place in the world, right under our noses... and to get our best analysis so you'll know how to stay ahead of the trends for maximum potential gains.

Claim your free package today by clicking the "order now" button below.

When you click the link below, you'll be taken to a 100% secure order form where you can review your request and tell us where we should send your free package.

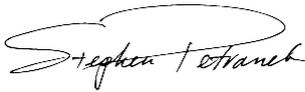

(Clicking the order button does not commit you to anything; you will simply have a chance to review your order.)

Again, you'll receive digital copies of all your bonus gifts – in just a few minutes – even if it's 3:00 AM on a Sunday—immediately after you place your order.

Then, very soon after, a hardback copy of ***Evolving Ourselves: How Unnatural Selection and Nonrandom Mutation are Changing Life on Earth*** will arrive at your postal mailing address.

Thank you for reading this message,

Sincerely,

Stephen Petranek  
Editor, ***Technology Profits Confidential***  
November 2015

You Can Review Your Order Before it's Final

PS. I just put the finishing touches on another bonus report I'm sending you, absolutely free, when you sign up through this offer today...

### **Bonus #5: CRUSHED: Dump These Three Industries Before They Crash and Burn**

In this report, I'll give you the inside scoop on three major industries that will be absolutely decimated in next ten years or so...

Industries you won't want to touch with 30 foot pole, unless you plan on losing everything you worked for up till now...

The scariest part is, almost everyone I know has a stake in at least one of these doomed industries – either in a brokerage account, a 401k or an IRA.

If you're concerned about your retirement money being there when you need it the most, then it's critical to read this ASAP to protect yourself from big losses in the coming months and years.

This bonus report, "***CRUSHED: Dump These Three Industries Before They Crash and Burn***" is also yours FREE, just for agreeing to take look at Juan's book.

Go ahead and click the order now button below to get started...

See you on the other side!
