

A license to empower your practice

NobelClinician® Practice Setup

Set up your practice for success

For small and large practices

Make your practice more efficient and successful with the NobelClinician Practice Setup. Whether you work in a small or a large clinic, have your own CB(CT) scanner or simply want to improve collaboration between team members, it sets your practice up for success. The software can be adapted to your specific needs, so you get a solution that works for your practice.

NobelClinician in all your rooms, for all your colleagues

Give your whole team access to NobelClinician. With the new practice setup you can focus on clinical tasks and patient care, while other staff have the tools to provide the required support. The result is a more effective treatment team.

DICOM files ready when you are

Diagnose your patient immediately as new 3D (CB)CT data is automatically imported and visualized in NobelClinician through the new TeamPorter application.

Safely involve your coworkers

Decide who can approve treatment plans or place orders and track who has worked on a patient file. This way, you can ensure that the right colleagues are involved.

Stop worrying about backups

All NobelClinician patient data is automatically saved in one location, so it's easy to back up.

Be connected everywhere

Access your patient data from any computer, whether in the practice or remotely with NobelConnect.
