CREATE • INNOVATE • DELIVER

The world's best electromagnetic vibratory conveyor just got better.

Running in food plants globally for over 20 years, PPM's VF conveyor range is praised for having the lowest maintenance on the market and for its industry-leading cost of ownership. Now, using innovative patent-pending EZ Swap technology, PPM's new VF One has made the only two moving drive parts replaceable - dropping overall cost of ownership even lower.

Replaceable drive parts mean a significant reduction in potential downtime from component failure, with replacement install time taking under an hour for all drive springs, and less than two hours for the drive coil. Better yet, both drive parts can be replaced with the conveyor still on the line.

A sleek, lightweight stainless steel design with single pedestal or ceiling mounting makes for quick and easy installation. And with an ultra-quiet operation at less than 70 decibels and the elimination of 99% of vibration forces, VF One is a smart fit for a wide range of distribution lines and applications.

When you upgrade to VF One, expect the same high-level of process control, versatility, and quick response time as our industry standard VF conveyor, but now with ultimate reliability to significantly increase the value of your production line.

EQUIPMENT APPLICATION:

- ✓ CONFECTIONERY ✓ VEGETABLES
- ✓ FRUITS ✓ MEAT
- ✓ SEAFOOD ✓ POULTRY
- ✓ SNACKS
