

## Military experience gives you a jump-start

The San Diego Electrical Training Center is **approved for V.A. benefits**, and with a military background, you can automatically by-pass some of our entrance requirements. With cross-over skills from related military training, you may even be able to waive some entry-level classes.

Even without related training, you are still an ideal candidate for electrical apprenticeship. Students with military experience have the drive, commitment, and work ethic to excel in our program, so you are encouraged to apply regardless of your military background.

## A career you can take *anywhere*

IBEW sets the standard for electrical training throughout the world, so your skills will be recognized by IBEW locals everywhere you go.

Since your benefits are managed by IBEW (not your employer) you can also maintain your health insurance and pension plan wherever you go — as long as you maintain your IBEW membership.

## Get started at **PositivelyElectric.com!**

To learn more about career options as an union electrician or telecommunications professional, visit us online or call us at 858-569-6322 ext.111.

We accept applications every Wednesday between 2:00 p.m. and 4:00 p.m. Call us or visit our Web site to find out what education or military records you must bring to include with your application.

### San Diego Electrical Training Center

4675-D Viewridge Avenue

San Diego, CA 92123

858.569.6322 ext. 111

The San Diego Electrical Training Center does not discriminate on the basis of gender, race, color, national or ethnic origin in the administration of its educational policy, admissions policy, scholarship and loans program and other school administered programs.

Before final acceptance into the program, each applicant is required to submit to and pass a urinalysis drug screen test, paid for by the San Diego Electrical Training Center.

Use your  
military training  
to fast track an  
*electrifying*  
career!

# EARN *while you* LEARN *with* IBEW

You've already honed your technical skills. Why start your career from scratch when you leave the military?

Use those skills to advance your career right now through the union electrical apprenticeship program offered by The International Brotherhood of Electrical Workers (IBEW) Local 569.

With IBEW, you can train for **technical jobs** in:

- Electrical construction
- Fire & life safety systems
- Computer networking
- Security & access control
- Telecommunications
- Solar power generation
- Building automation
- Manufacturing process controls
- Audio & video communications

As an IBEW apprentice, you would attend classes several days a month while gaining on-the-job experience with full-time union employers. Classroom training is conducted at the **San Diego Electrical Training Center**, a hi-tech educational facility that is internationally recognized for its leading edge programs.

*You never have to pay tuition as an IBEW apprentice and you will earn great wages while you are enrolled.* For current wage information, go to [www.positivelyelectric.com](http://www.positivelyelectric.com).

## Living wages *plus* great benefits!

When you are accepted into the apprenticeship program at the San Diego Electrical Training Center, you also become a member of the electricians' union, the **International Brotherhood of Electrical Workers (IBEW) Local 569**.

This makes you part of a team that works to keep industry standards and wages the best in the business. Along with receiving health and dental benefits for your entire family, you'll earn an excellent pension and have the assurance that IBEW is always looking out for you!

## Get college credit at **no cost**!

Classes at the San Diego Electrical Training Center are accredited through Palomar College, so you can earn an associates degree while completing our program just by taking a few additional classes — *and no tuition is required!*

## Two programs provide a broad range of options

Apprentices at the San Diego Electrical Training Center choose between two different tracks of study, both of which lead to many career possibilities.

### 1. Electrician

The course of study to become a traditional electrician, often referred to as an "inside wireperson," is a demanding program that takes about five years to complete. In this program, you will learn to work with virtually every type of electrical system, including high-voltage and solar. You could ultimately work in a broad range of environments, including power generation, industrial manufacturing, and commercial construction.

### 2. Telecommunications Specialist

This program is geared around electronic building systems, often described as the "nerve centers" of today's business environments. In the electrical industry, this is referred to as low-voltage work.

Most apprentices complete this program in four years and often end up working in hi-tech settings. With this training, you might install and maintain life-safety equipment for hospitals, design and implement complex building automation systems, or create sophisticated networks for audio and visual communications.

Detailed information about both programs, including pay scales, entrance requirements, and career opportunities, are provided at [www.positivelyelectric.com](http://www.positivelyelectric.com)
