

Can Dogs Eat Tuna?

Raw or canned tuna should not be used as a dog's main source of protein due to high levels of mercury. We explain what safe amounts and tuna types to feed your dog.

Dogs can eat tuna as a small treat, once in a while, but it should not be a daily protein source as large fish, such as tuna, can have high mercury levels. Although Murphy Brown was interested in checking out this canned tuna, it was swapped out for a treat of boiled chicken to be on the safe side. © Melissa L Kauffman
