CHALLENGES

Covid-19 and its unique requirements

With Phase 1 of the vaccines already begun and subsequent phases involving more and more people, the vaccination program will likely continue for many months - even into 2022. Current approved vaccines require two, time-critical doses and need to be kept at the correct temperature until delivered. To meet these challenges, healthcare providers need to:

- Manage vaccination and overall resources
- Design, implement, and manage new workflows
- Utilize technology to make informed decisions and automate workflows
- Plan for, manage, and report valid resource capacity
- Create flexible reporting for multiple regulatory agencies and audiences
- Manage complex logistics for staffing, injection locations, and vaccine management
- Accommodate new vaccines
- Remain flexible due to changes in situations and requirements

THE SOLUTION

Improving workflows

The news of vaccines for Covid-19 couldn't come at a better time. But, for healthcare providers, it also means you need to figure out how best to manage and track the vaccination process. Brightwork has been developing workflow plans as a solution, including for numerous distinct applications (EHRs, State Immunization Databases, etc.), and for patient scheduling and follow-up appointments, forms, registries, and more. This will allow providers to track patient progress and insurance, as well as comply with the federal government, CDC, HHS, WHO, and other governing bodies.

Our solution includes dashboards for senior management, analytics and reporting tools for IT and clinical departments, and other integral departments. Each deployment is tailored for distinct healthcare systems.

Learning how to utilize methods and tools (many you already have) will set up healthcare providers to track the variety of vaccinations, the two-dose requirements, and improve overall workflows for the entire organization.

BRIGHTWORK CONSULTING

WHO WE ARE

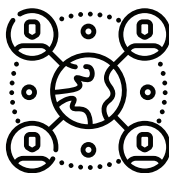

Founded in 2017, Brightwork Consulting is a Microsoft Partner and WBE- and LGBTBE-owned professional services firm specializing in Teams utilization, capacity planning and management, change management, IT/business strategies, risk management, solution deployment, informed decisions, and program/project management. We serve clients in the healthcare and commercial and public sectors by acting as change agents and risk mitigators who incorporate proven project management methodologies into everything we do. We understand our client's challenges and we collaborate with healthcare providers to introduce and support innovation through our services and technical resources.

USING WORKFLOW AUTOMATION TO TRACK VACCINES

Flexibility - our custom workflows and dashboards provides healthcare providers with greater flexibility because they show how and where resources are being allocated and make changes to benefit the team and the organization.

Scalability - our services allow clients to scale their vaccination operations by allowing them to see in real-time where resources are needed, where they currently are, and what would happen if they were re-allocated. Utilizing dashboards, they can improve scheduling for employees and the variety of outside cohorts.

Efficiencies - with automated workflows, clients can efficiently utilize resources, reduce overhead, and focus their attention on vaccinating more patients. This can help the organization free-up important resources for other needs.

Informed decisions - clients can improve their vaccination program by utilizing automated reminders, integrating with existing systems, and incorporating analytics that measure reach and efficacy. This allows them to make informed decisions about their program and their overall resource needs, and minimize risk.

Brightwork Consulting can help you solve Covid-19 vaccination tracking challenges
