

Identity & Access Management

Google handles Identity at a global scale for Google services. Leverage that same technology for your identity solution.

Google is well-placed to act as your gateway to the cloud, extending users' identities beyond the firewall. This service includes developing a robust cloud identity model and understanding how existing information can be federated to the cloud.

What's Included

- Identity Management Assessment
- Future architecture design
- Collaborative design review
- New architecture implementation

The Approach

Assess

Discover the business goals for identity management as well as the current identity platform architecture in place.

Design & Education

Understand the vision of Google as an identity provider. Design a new identity architecture based on Google.

Execute

Roll out the new architecture, configure existing systems, and install new products if applicable.

The Benefit

IT Simplification

Remove complexity to reduce hardware requirements and free up resources time to allow more focus on other projects.

ROI

Unlock more value in your investment in the Google Platform by saving IT and support costs.

Support Load

Reduce the number of support cases with a simpler identity management architecture.

Assess

Week 1 (~4 HRS)

Design & Educate

Week 1-3 (~18 HRS)

Execute

Week 4+ (varies)
