

Aruba.it: Verify your domain

Why verify?

We don't want someone else to use your **google.com** domain to sign up for Google Workspace. You can help us keep your domain safe by showing us that you are the owner.

How do I verify?

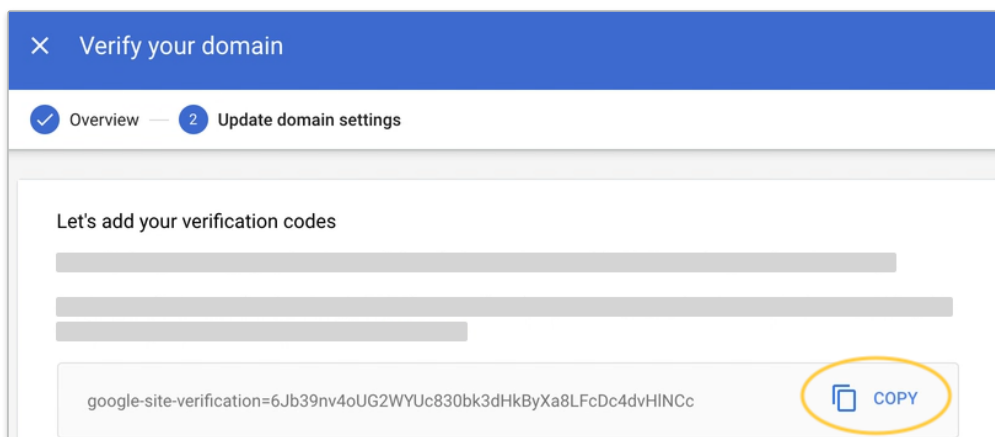

When you sign up for your Google service, you get a verification record that you copy and paste into your domain settings (usually stored with your domain host).

Need help with verification? Contact [Google Workspace support](#) for fast, personalized help that's included with your Google Workspace subscription. [Google Cloud support](#) is available for customers with Silver, Gold, or Platinum support levels.

[Open all](#) | [Close all](#)

Step 1: Get your unique verification record

1. Open the [Google Workspace setup tool](#) .
Your current account, `wiedemer@google.com`, doesn't have permission to do these steps. To continue, switch to an *administrator account*. This will open the Google Admin console.
[Switch to administrator account now](#) or [Learn more](#)
2. Click **Continue** to verify your domain with a TXT record.
3. Look for your verification code in the setup tool and click **Copy**.

Step 2: Sign in to your domain host

1. Leave the **Google Admin console** setup instructions open.
2. Open a new browser tab or window and go to the [Aruba.it control panel](#) .

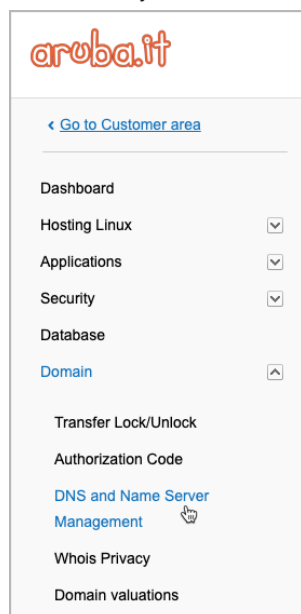

3. Enter the Aruba.it username and password that you created when you opened your account.

4. Click Enter.

If you don't know your account information, you can [reset your password](#) or contact [Aruba.it support](#).

Step 3: Add the verification record to your domain's DNS records

1. On the left of your Aruba.it dashboard, click **Domain > DNS and Name Server Management**.

2. If needed, for DNS and Name Server Management, click **Enable > Confirm**.

Activation can take approximately 60 minutes.

3. When DNS and Name Server Management is activated, click **Manage DNS**.

4. Open the following instructions for the type of verification record that you want to add to your domain's DNS records.

Add a TXT verification record (most common)

a. Scroll down to the **TXT Record** section and click **Manage**.

b. Click **Value** and paste the entire verification record that you copied in [step 1](#).

c. Leave the **Host** field empty.

d. Click **Add Record** to add the TXT record to the domain's TXT record..

Add TXT Record

Host :

Value :

Anything relating to the management of the TXT record, the creation of an SPF string or their enabling/certification is entirely the responsibility of the customer. Be careful not to enter any blank spaces before or after the value.

e. Click **Continue**.

Modify TXT Record for Domain : History

Select All

X	Host	Value
<input type="checkbox"/>	[empty]	google-site-verification=
<input type="checkbox"/>	[empty]	v=spf1 include:aruba.it ~all

f. At the bottom of the page, click **Save Configuration**.

TXT Record

Hostname | Value

[empty] google-site-verification=

[empty] v=spf1 include:aruba.it ~all

SRV Record

Service	Protocol	Name	Priority	Weight	Port	Target
autodiscover	tcp	example.com	0	0	443	autodiscover.aruba.it
xmpp-client	tcp	example.com	5	0	5222	imchat1.aruba.it
xmpp-server	tcp	example.com	5	0	5269	imchat1.aruba.it

g. Click **OK** to confirm your new TXT record.

Add a CNAME verification record

a. Scroll down to the CName Record section and click **Manage**.

CName Record

Hostname	CName
admin	admin.redirect.aruba.it.
albumdigital	redirect2fotoalbum.aruba.it.
autoconfig	autodiscover.aruba.it.
blog	redirectblog.aruba.it.
fotoalbum	redirect2fotoalbum.aruba.it.
imap	imaps.aruba.it.
photoalbum	redirect2fotoalbum.aruba.it.
sms	admin.sms.aruba.it.
stat	redirectstat.aruba.it.
statistiche	redirectstat.aruba.it.

b. For the Host field, enter the contents of the Setup Wizard's Label / Host field from [step 1](#).

c. For the CName field, enter the contents of the Setup Wizard's Destination / Target field from [step 1](#).

Add CName Record

Host : .

CName:

d. Click **Add Record** to add the CNAME Record to the domain's DNS records.

e. Click **Continue**.

f. At the bottom of the page, click **Save Configuration**.

g. Click **OK** to confirm your new CNAME record.

Step 4: Tell Google Workspace to check your verification code

1. Open the [Google Workspace setup tool](#).

Your current account, `wiedemer@google.com`, doesn't have permission to do these steps. To continue, switch to an *administrator account*. This will open the Google Admin console.

[Switch to administrator account now](#) or [Learn more](#)

2. Click **Continue**.

3. Scroll to the bottom of the next page and click **Verify my domain**.

Important! It might take additional time for your registrar to publish the verification code. If the Google Workspace setup tool gives you an error message, wait an hour before you try again.

In extreme cases, it can take up to 48 hours for your registrar to publish your verification code.

Next steps

1. Return to the Google Workspace setup tool, where you can:

- Add other users to your account.
- Activate Gmail for your organization.

2. Review the [quick start guides](#) to continue setting up Google Workspace for your organization.
