

Cancer, Meet Your Match.

The UVA Stem Cell Transplant Program offers some of the most advanced treatments available for blood diseases.

Patients with high-risk and life-threatening blood diseases, such as leukemia, multiple myeloma and lymphoma, now have greater access to potentially curative bone marrow and stem cell transplants and all-around excellent care.

UVA Cancer Center is one of just three sites in Virginia with access to the Be the Match® registry, the world's largest and most diverse bone marrow donor registry. A broader pool of donors means the odds are greater that patients will find the best possible match.

To learn more, visit uvahealth.com/stemcell or call **434.924.9333**.

Our skilled team of specialists have earned accreditation from the Foundation for the Accreditation of Cellular Therapy (FACT) for their proven excellence in cellular therapy, including the full range of bone marrow and stem cell transplants.
