Shape Your Community Defense Strategy

Join the Global Resilience Federation

Today's cyber attacks are becoming more frequent, and more complex. Organizations that are pulling together to share information on these attacks and on new physical threats are successfully building stronger mutual defenses.

The Global Resilience Federation (GRF) can help by providing the infrastructure, expertise, and resources you and your peers need to build a community-based defense. And you can evolve it at your own pace. This not-for profit governance entity offers these benefits as part of its mission. It aims to help sectors and organizations protect themselves from acts that can hinder their ability to provide services critical to the orderly functioning of the global economy.

Protect and Expand Your Sector Community

The GRF is an inclusive body, welcoming participation of members from all major industries and all regions around the world. It provides strategic guidance, best practices, and support services to information-sharing groups, including ISACs and ISAOs, policy groups, and international bodies for various lines of business. The GRF offers a breadth of experience and expertise on community building. It initiates activities that drive memberships, create proven value propositions, and develop awareness.

Fostering Trust and Collaboration

ISACs/ISAOs are built on a foundation of trust. Developing that trust within a sector and among other members of the greater sharing community takes a keen understanding of how to forge strong relationships. The GRF can help you determine the best approach for engaging with other organizations and for navigating these relationships to create a robust, unified community. Organizations that join the Global Resilience Federation will be on the board.

Global Resilience Federation Membership

By becoming a member of the GRF, you join like-minded thought leaders from many different disciplines who come together to:

- Protect their sectors
- Collaborate closely with other sectors
- Help evolve the capabilities of their ISACs/ISAOs

Membership offers you access to more than 80 resources and the intellectual capital of the Financial Services Information Sharing and Analysis Center (FS-ISAC). For 17 years, FS-ISAC has been the global financial industry's go-to resource for cyber and physical threat intelligence analysis and sharing. Leveraging the experience and proven infrastructure of FS-ISAC, you can focus on the core mission of your particular industry.

Membership also gives you the opportunity to be on the board and play a key role in the GRF's decision-making processes. You can impact GRF's activities based on the experience and insights you have drawn from your own community.

Benefits for Evolving Communities

Both maturing intelligence-sharing communities and those in the early stages of developing an ISAC/ISAO can benefit from the Global Resilience Federation by:

- Leveraging existing infrastructure and customizing it to meet the unique needs of your market
- Adding value to the community through support from dedicated resources
- Influencing evolving security technologies based on the needs and trends you're seeing in your community

- Engaging in exercises to prepare your community for a major breach or other security event, so you know how to react when such events occur
- Strengthening the influence of your community through representation on the GRF board and participation in GRF decision-making processes

What We Offer

To provide these benefits, the GRF offers these member services and resources:

Intelligence, Vulnerability, and Analysis	Relevant and actionable alerts and advisories on cyber and physical threats. This includes daily cyber open source reports, cross-sector intelligence and relevant alerts, and analyst support.
Member Communications and Interaction	Representation on the GRF board and member committees, along with daily reports, monthly member calls, and member-initiated surveys
Marketing and Sales Assistance	Assistance with member recruitment, marketing, and events
Community Preparedness and Response	Threat exercises, crisis management expertise, and other resources, including the All Hazards Crisis Handbook and our Emergency Notification System
Capabilities that Foster Community Sharing	Threat intelligence platform, threat automation, and new, integrated products and services for all hazards
