

# Designed to Enhance Your Skills. Not Test Them.

More effective doesn't have to be more complicated. Tides Medical's high-quality amniotic tissue graft products are dual-layered and stored at room temperature, making them easy to use in surgical barrier and wound covering applications.

Help your patients heal with technology shown to reduce scar tissue and inflammation<sup>1</sup>. Artacent Flex is an advanced surgical barrier for tendon and nerve wraps in the lower extremities. Artacent Wound is an advanced wound covering to aid in the treatment of chronic, non-healing wounds.

Both products are on display and available as samples in our booth, No.1124. Be sure to make your way over to us to learn more.
