

Painful Periods?

Do you experience painful periods? Dr. Colleen Mullin of CHPG Women's Health wants you to know you may be suffering from endometriosis. This painful disorder occurs when uterine tissue grows outside of your uterus, often causing significant pelvic pain. Although cramping is a common complaint for many women during their period, women with endometriosis often suffer with menstrual pain that's far worse and may include lower back and abdominal pain.

Other signs and symptoms of endometriosis may include:

- **Pain with bowel movements or urination.** You're most likely to experience these symptoms during your period.
- **Excessive bleeding.** You may experience occasional heavy periods or bleeding between periods.
- **Significant fatigue, diarrhea, constipation, bloating or nausea,** especially during menstrual periods.

Relief is possible, to learn more about what treatment options might be right for you, please contact Dr. Mullin to schedule an appointment.

**To schedule an appointment,
please call 303-649-3180.**

Colleen Mullin
MD, FACOG
