Meet your next tool:

Reclaim your rest with CrewRules: Illegalities can derail your airline faster than you can say "call scheduling", which is why our system continually pulls live operational data to monitor legal limits. These reports are fully visible to crew, scheduling, and management.

Find a better way to payday with CrewPay: Make errors a thing of the past as you process pay easier than ever before. Crews and your payroll department are able to communicate and dispute via a payroll app, and pay adjusments are easily made via both front and back end access.

Make reserve an asset, not an obstacle with ELP Reserves: With our suite of reserve solutions, we arm scheduling and crews with the overview they need to make the most optimized decisions. Automate less complex procedures with an eye on today *and* tomorrow's operation, and save everyone stress, time, and money.

Communicate on your terms with CrewPortal Miscommunication could be costing your airline thousands, but not with CrewPortal. It creates a complete picture of your operation from scheduling, to crew, to payroll and beyond. Think closed- loop communications on your terms, all with on singular sign-on.

Display your way with ELPDash: Our Dashboards were designed to put all the information your various teams need at their fingertips. Custom displays with drill-down capabilities distill all the details used on a regular basis, allowing for proactive monitoring. Plus our dashboards integrate seamlessly within your current systems.

Not to play favorites, but we're pretty excited about the new kid on the block: CrewBid

Because you deserve simple.

And we're here to give it to you; CrewBid simplifies some of the most time-consuming, complex aspects of your operation- vacation and vacancy bidding.

It specifically targets vacation (yearly, monthly and daily trading) and vacancy bids all within one convenient, automated interface. Crew members can monitor their bid requests and outcomes through a webpage and app, ensuring easy access to information for everyone. Additionally, crews can automatically sell, trade, and adjust vacations through the app. Automated bid awards seamlessly integrate with CrewPay, Crew Rules, and the ELP Reserve product line, offering you and your team a closed loop of information and tools that seamlessly fit together, providing transparency.

Vacancy bids are also automated, with base openings being automatically communicated to crews. Crews are able to keep multiple standing bids open, and are automatically informed when their transfer goes through- if it's denied after a run they're also told why.

CrewBid also boasts a backfill feature, so your bases always maintain adequate staffing. Base vacancies are carefully tracked so that you're able to balance honoring as many requests as possible without ever sacrificing coverage.

"The implementation of ELP's CrewBid for Vacation Bidding has decreased the processing time of the annual vacation bid from over 15 hours to minutes, while increasing the accuracy of the award. The automation of our daily vacation trading has removed a 7 day per week manual task from my team. Additionally, the intuitiveness of the user interface has reduced email question volume to a minimal (almost non-existent) level."

- Jeffery Bosch, Senior Director of Crew Resources, Sun Country Airlines
