

ECO-FRIENDLY MINI-CAMPAIGN

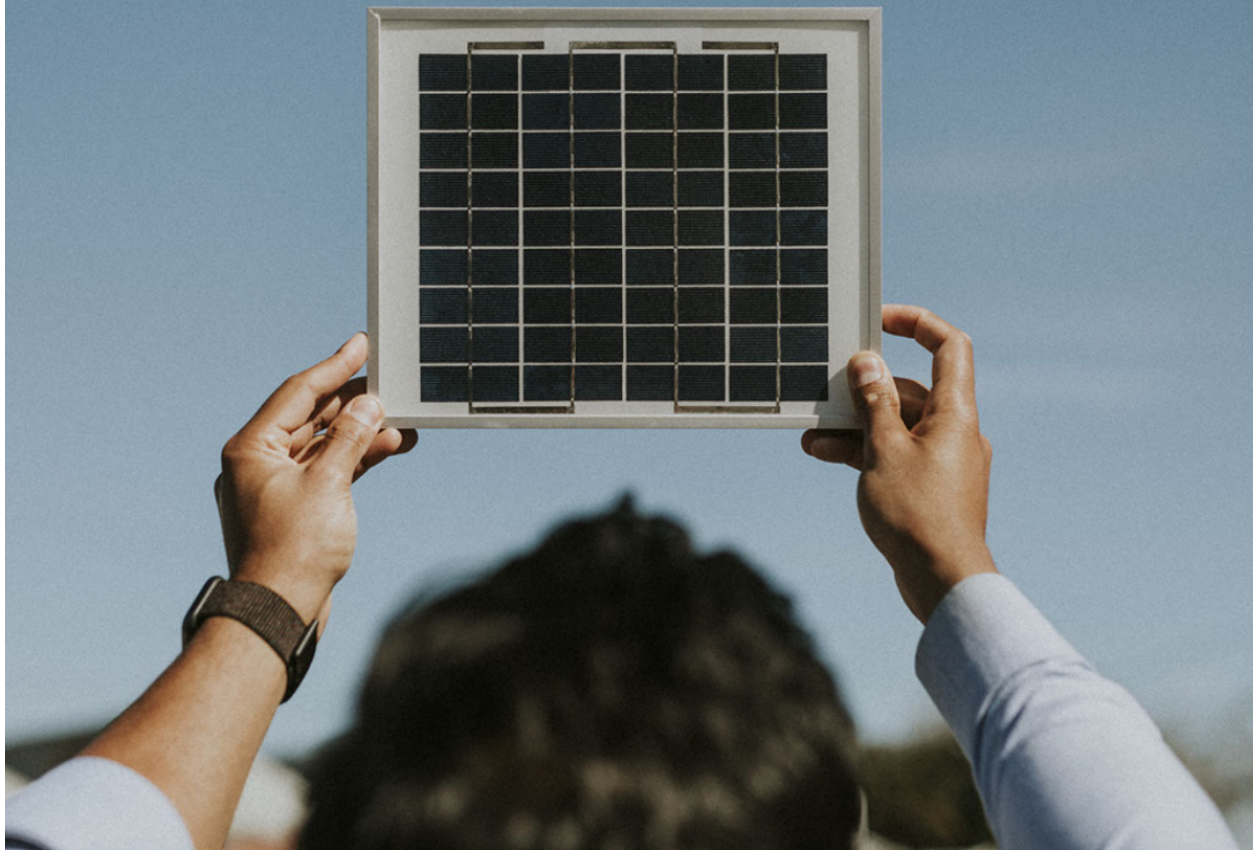

DISCOTECH II

DISCOTECH is based in San Francisco, and we, like many, truly value the beautiful environment in which we are lucky to call our home.

POST ONE

let's save the planet!

DISCOTECH

As a Music Industry IT support company, there is potential for a huge environmental footprint.

We have a team of 10 full time engineers that are able to provide responsive support across the great state of California, whilst also managing, maintaining and installing hundreds of PCs, sound systems and servers.

It is through thoughtful planning and strategy that we strive to do our best to be as green as possible!

POST TWO

FACT 1

As technology improves it becomes a lot more efficient. Hardware is increasingly manufactured with aggressive power saving measures; automatic power off, lower power modes and so on. Having newer hardware reduces the amount of energy used through increased efficiency. But remember to recycle your old hardware!

Paperless is a lot easier than it sounds. We communicate internally via Microsoft Teams so we never need to print anything. We also encourage staff to write notes electronically with the added benefits of them being accessible from anywhere in the world and they are a lot harder to lose.

FACT 2

FACT 3

Even before the Covid-19 pandemic, DISCOTECH encouraged staff to work from home a couple of days a week. Whilst working from home allows for an improved work-life balance, it also reduces our footprint by cutting down on the amount of commuting. We are now increasing the amount of remote audits and consultations as we have software that is able to analyse a site and reduces the need for a physical site visit.

3 INSPIRING ECO-FRIENDLY FACTS

Due to the large amount of plastics and metals used in technology, recycling really is a must for old or broken items you want to get rid of.

The alternative is burning them down and releasing toxic fumes or landfill where the items will take hundreds of years to break down!

POST THREE

FACT 4

Around 6 times a year we recycle all our hardware; PCs, servers, telephones and parts. This usually is a small mountain of heavy things, usually weighing as much as a small car. This hardware is then sent off to a sorting plant, where parts will be upcycled and used in other PCs or broken down and used as materials for manufacturing.

We encourage our clients where possible to store data on the cloud as opposed to a local server. Whilst there is an existing benefit of the data being more secure, not having to use a local server drastically reduces the amount of electricity consumed by us and our clients. The need to service or repair the server which would come with emissions from travelling to the site is completely removed.

FACT 5

FACT 6

As technology improves it becomes a lot more efficient. Hardware is increasingly manufactured with aggressive power saving measures; automatic power off, lower power modes and so on. Having newer hardware reduces the amount of energy used through increased efficiency. But remember to recycle your old hardware!

3 INSPIRING ECO-FRIENDLY FACTS

DISCOTECH'S mean green planet saving regime!
Join us as we combat toxicity and set out to save the world with technology!

EXTRAS FOR WEB

We help businesses and individuals in San Francisco and across the Bay thrive through the power of IT and sound support services.

From Servers to Soundcheck, DISCOTECH!

DISCOTECH has a drive to always fix issues and problems for our customers. Our company represents our absolute dedication to customer service, our resolve to learn and develop our strategic and specific IT knowledge and skills, and our resolve to embrace the almost constant change and challenge that working in IT brings.
