

Our Journey Began at the Heart

Formulated with Care to Promote Wellness

The MyRemede journey began out of a sincere desire to help people improve the quality of their daily lives. To do our part, we apply rigorous science to harness the natural botanical benefits of hemp. Our detailed understanding of biochemistry and application of cutting-edge technology has led us to create industry-leading products.

We source our hemp from a trusted network of Oregon hemp farms, extract a full spectrum of beneficial hemp-derived compounds, create wellness-promoting formulations, and test at multiple stages of production to make sure our CBD products contain the things we want in our bodies, and none of the things we don't. We control every aspect of our operation so our mission to promote wellness is never compromised.

We're here to help people find a greater sense of well-being, and we do what we do because we care.

The Origins of Cannabinoids Matter

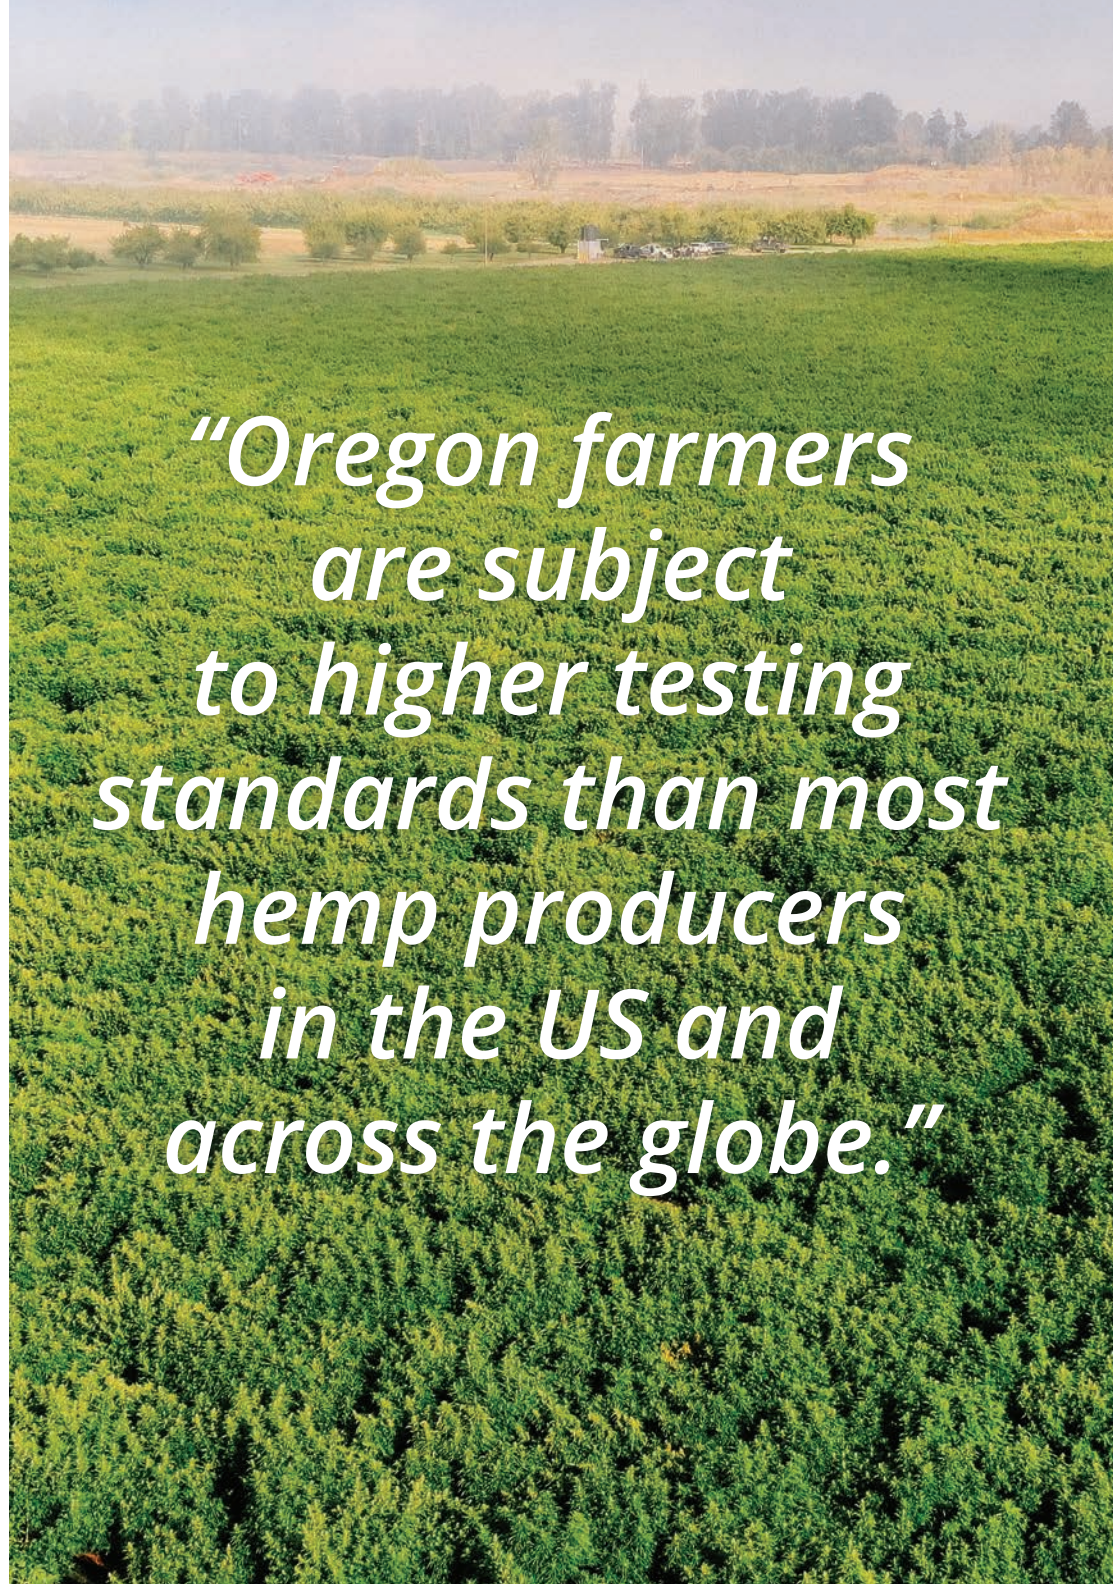

We know the hemp plant's growing environment plays a crucial role in the expression of cannabinoids, so we only source our hemp from a trusted network of sophisticated farmers in Oregon where the climate yields a richer cannabinoid profile from the plant.

Because the state of Oregon has relatively dry microclimates with months of little to no rain, the hemp plants don't need to be as resistant to mold, which increases their cannabinoid and terpene content. Additionally, Oregon hemp is tested for a wider variety of pesticides and contaminants because Oregon farmers are subject to higher testing standards than most hemp producers in the US and across the globe.

What results from this unique growing environment is a plant rich in CBD, as well as a richer composition of other helpful cannabinoids and terpenoids.

*"Oregon farmers
are subject
to higher testing
standards than most
hemp producers

across the globe."*

High Quality Products that
Stand Up to Rigorous Testing

Hemp Extract is More Than Just CBD

Most hemp extract is formulated with only CBD in mind, removing solvents quickly with intense heat, which risks the degradation and loss of other beneficial molecules in the process. But the beauty of hemp lies in its full spectrum of cannabinoids and terpenoids, each with a unique set of beneficial properties, working together to promote wellness. That's why we developed our methodologies and cutting-edge extraction technology to preserve a wide range of natural botanical compounds.

Our extraction procedures are carefully designed to minimize decarboxylation. During the evaporation process where we remove residual solvents, we maintain a heating temperature of no more than 60°C, as opposed to the industry standard of 120 - 160°C. It's one of several deliberate measures we take with the intention of preserving as many helpful cannabinoids as possible.

With an array of beneficial plant compounds at our disposal, we have more opportunities than ever to promote wellness.

Scientifically Formulated for Optimal Absorption

Our mission is to promote wellness, so it's important to us that our products are easy for the body to absorb.

To preserve lipids and other molecules in the hemp plant, we refine our Full Spectrum Extracts with supercritical CO2. It's one of the many ways we've utilized our combined years of experience in plant science, engineering, and supplement production to bring out the best possible values of all ingredients during our manufacturing process.

Every MyRemede product is subject to rigorous testing throughout production, and comes with a Certificate of Analysis from an accredited third-party lab.

The 6 Quality Safeguards

● Pre-Harvest

MyRemede tests hemp 4 weeks prior to harvest to ensure appropriate CBD content as per state requirements.

● Post-Harvest

Our hemp is then tested post-harvest to confirm CBD content and screened for pesticides, microbials, and heavy metals. From there, we transport all harvested and tested hemp to our facility for processing.

● Pre-Extraction

Once received at our processing facility, we test again for pesticides, microbials, and heavy metals. Once cleared, the hemp is now ready for extraction.

● Post-Extraction

Once the extraction phase is complete, we run an additional test to ensure our extract remains free of contamination.

● Post-Formulation

Once cleared, we formulate our extracted CBD for product manufacturing. After mixing product with binders, we conduct another round of testing to ensure quality and compliance.

● Pre-Packaging

Once our products are manufactured, we test them again to make sure all concentrations match our manufacturing specifications. Products are then bottled and packaged for distribution.

Ensuring Quality and Protecting Against Impurities with a COA

In addition to the quality safeguards we put in place during production, we make sure every finished product receives a Certificate of Analysis (COA) from an accredited lab to let you know the product is free of commonly harmful impurities, and that its cannabinoid content matches product specifications.

Manufacturers should send every batch of every product to a testing lab to show that:

- 1 The contents of the product match what is advertised.
- 2 The products are safe for consumption.

One should always practice due diligence and check the COA to protect oneself from fake or low-quality products.

Know Exactly What You're Paying For

A study conducted in 2017 found that almost 70% of online CBD products are mislabeled, either having substantially more or less CBD than advertised. If a product's chemical makeup doesn't match what's on the label, the consumer's best interest may be compromised.

Four potential discrepancies to look for:

- 1 Too much THC - Products must, by law, contain 0.3% delta-9 THC or less, by dry weight.
- 2 More CBD than advertised - Inability to monitor serving size.
- 3 Less CBD than advertised - Desired result may not be attained.
- 4 Missing cannabinoids - Full spectrum or broad spectrum hemp extract should contain a variety of cannabinoids for desired wellness.

Protect Yourself from Harmful Chemicals

Harmful chemicals and other contaminants can make their way into CBD products at multiple stages of both the hemp growth cycle and the manufacturing process. In addition to revealing a product's inherent chemical properties, a COA should let you know the product is free of commonly harmful impurities.

Top contaminants to look out for:

X Microbials **X** Pesticides **X** Solvent Residue **X** Heavy Metals

At MyRemede, we implement rigorous testing because consumer safety is our number one priority.

All MyRemede COA's are available at myremede.com

Everything You Need to Know About

What is the endocannabinoid system (ECS)?

The endocannabinoid system (ECS) is a biochemical communication network that plays a crucial role in regulating our physiology, mood, everyday experiences, and overall health. The ECS is present almost everywhere in the body, facilitating regulatory responses across the central nervous system, digestive system, many vital organs, and other bodily functions.

Humans and animals make their own cannabinoid called Anandamide, which binds to cannabinoid receptors like a key fitting a lock, helping the body to achieve homeostasis, or internal regulatory balance. CBD and other cannabinoids can act as mimicking keys and bind to these same receptors.

Why choose Full or Broad Spectrum CBD products over CBD Isolate?

When you take a CBD Isolate, you're getting the benefits of CBD only. The Full or Broad Spectrum Hemp Extracts found in MyRemede softgels, tinctures, and beauty products offer the advantage of the hemp plant's natural cannabinoid profile.

How should one use CBD?

Everyone's body absorbs, metabolizes, and responds to CBD differently. Starting with smaller amounts and working your way up over two or three weeks is typically the best way to find your optimal serving size.

CBD is also a biphasic compound. It may result in different reactions at different concentration levels. That's why MyRemede offers products of varying CBD potencies to help you find the most effective serving size.

What time should one take CBD?

The time of day you take CBD, as well as the amount you take, should depend on your wellness needs.

The effects of CBD also depend on how you consume the product, as well as the format in which it's delivered. The body absorbs softgels differently than it does tinctures. That's why it's best to start with a low amount, track how your body reacts to it, and observe how long it takes for it to take effect.

Will CBD get one high?

CBD is non-intoxicating, promoting wellness without producing the high associated with THC, the other prominent cannabinoid of the cannabis plant.

Is CBD Addictive?

CBD is generally considered non-habit forming. The World Health Organization has reported that "CBD exhibits no effects indicative of any abuse or dependent potential" in humans.

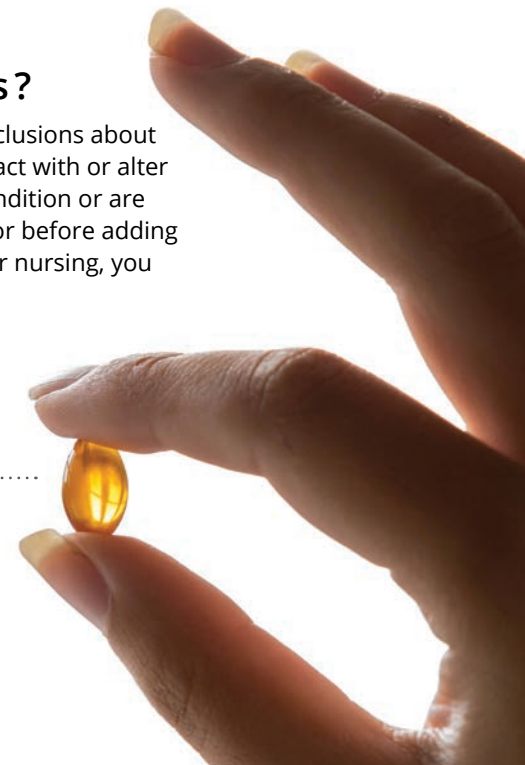

Will CBD make me sleepy?

CBD won't necessarily make you sleepy, but it may make you feel calm, helping you to fall asleep.

Are there other side effects?

More research is needed to draw clear conclusions about CBD's potential side effects. CBD may interact with or alter the effects of medications. If you have a condition or are prescribed medication, consult with a doctor before adding CBD to your regimen. If you are pregnant or nursing, you should not use our products.

Beauty

Pets

Supplements

MyRemede CBD Supplements are made from Full Spectrum Hemp Extract that concentrates the natural botanical benefits of the plant. Scientifically formulated with convenience and wellness in mind, our Supplements are easy to ingest while preserving the hemp plant's natural profile of CBD and other beneficial cannabinoids.

CBD Tinctures

MyRemede CBD Tinctures are Full Spectrum Hemp Extracts that concentrates the natural botanical benefits of the plant. Our farmers, engineers, and scientists work together using best practices and cutting-edge technology to ensure that all MyRemede products are formulated for optimal wellness.

Lemon
300 mg

Serves as an optimal starter tincture for most wellness needs with refreshing notes of piney citrus.

Chocolate & Mint
500 mg

Combines a moderate concentration of beneficial cannabinoids with a tasty mix of rich chocolate and cool mint flavors.

Cinnamon
750 mg

Provides a rich concentration of CBD and other beneficial hemp compounds with a spicy, invigorating flavor.

Vanilla
1500 mg

Offers a sweet, soothing vanilla flavor with a substantial concentration of CBD and other cannabinoids.

CBD Softgels

MyRemede CBD Softgels are rich in CBD and several other naturally occurring cannabinoids, all of which can help maintain wellness throughout the body.

10 mg

Serves as an optimal starter for a wide variety of individual wellness needs.

25 mg

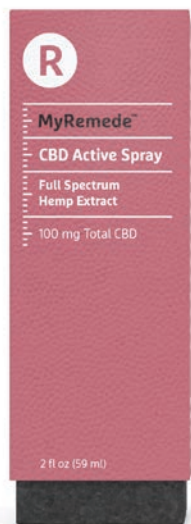

Tailored for users looking for a rich concentration of CBD and other potentially helpful compounds in hemp.

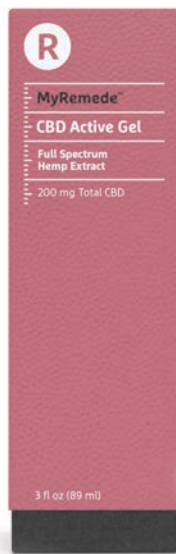

Active

MyRemede Active products utilize the natural botanical benefits of hemp to infuse balance and wellness into an active lifestyle. Formulated for the physical performance and recovery that your daily life requires, our Active products contain a variety of precious cannabinoids and hemp compounds that leave the body feeling invigorated.

CBD Active Spray 100 mg

MyRemede CBD Active Spray is a topical spray made with Full Spectrum Hemp Extract, rich in CBD and a host of other helpful cannabinoids that promote wellness when applied to the skin.

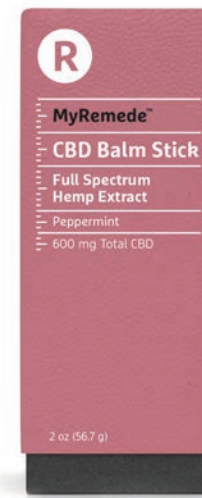

CBD Active Gel 200 mg

MyRemede CBD Active Gel is formulated to enhance your active lifestyle and post-workout wellness.

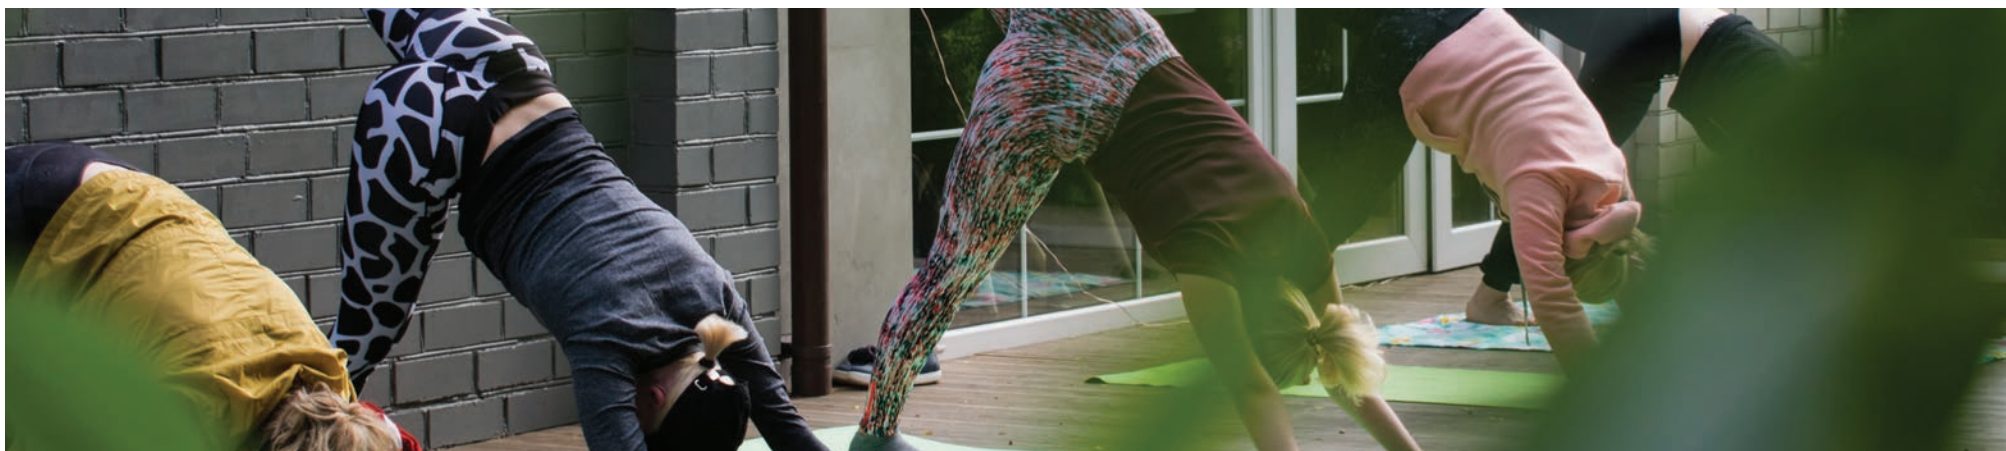

CBD Skin Cream 450 mg

MyRemede CBD Skin Cream is a fast-absorbing cream scientifically blended to help invigorate and moisturize your skin.

CBD Balm Stick 600 mg

MyRemede CBD Balm Stick is a topical balm that combines the benefits of hemp, peppermint, beeswax, and several other wellness-promoting ingredients, conveniently designed for use on the go.

Beauty

Available in a variety of carefully crafted formulas, MyRemede Beauty products are made from Full Spectrum Hemp Extract — containing a multitude of beneficial cannabinoids to promote wellness while nourishing your skin and face. Our CBD Beauty products are scientifically formulated with herbal extracts and oils to help nurture the body and balance the mind.

CBD Bath Bombs 50 mg

MyRemede CBD Bath Bombs contain herbal extracts and oils to help nourish the skin while encouraging a greater sense of well-being.

Bergamot & Lime

Combines the nourishing effects of hemp with a rich, uplifting citrus aroma.

Oatmeal, Milk & Honey

Invigorates the body with nourishing ingredients and engages the senses with a sweet, cozy aroma.

Lavender

Provides a soothing herbal aroma for a greater sense of sustained calmness and relaxation.

CBD Soap 50 mg

MyRemede CBD Soap contains herbal extracts and oils that will leave your skin nourished and mind balanced. Our soap is designed to kill bacteria while promoting wellness with a rich combination of CBD and other cannabinoids from Full Spectrum Hemp Extract.

Eucalyptus Oil & Aloe Vera

Provides a powerful, soothing scent that helps to calm the senses.

Lavender & Mint

Delivers a rejuvenating combination of soothing lavender and invigorating mint aromas.

CBD Face Serum 200 mg

MyRemede CBD Face Serum is formulated with hemp extract and distilled botanicals such as rose hip and lavender for well-nourished and glowing skin.

Pets

Whether designed for humans or pets, every MyRemede product is formulated to promote wellness with the help of several precious cannabinoids. We apply rigorous science and cutting-edge technology to our Pet products — harnessing the natural botanical benefits of hemp to help your furry companion live a happy and healthy life.

CBD Pet Tinctures

MyRemede CBD Pet Tinctures are scientifically formulated with Full Spectrum Hemp Extract to promote wellness in your canine companion.

Sm. / Med. Breed **100 mg**

An optimal serving size for your small-to-medium sized furry companion.

Cheddar Cheese Flavor

Bacon Flavor

Med. / Lrg. Breed **200 mg**

A flavorful concentration of botanical compounds for your medium-to-large sized furry companion.

Cheddar Cheese Flavor

Bacon Flavor

CBD Dog Chews 2.5 mg

MyRemede CBD Dog Chews are hemp-derived soft chews that utilize a Full Spectrum of helpful cannabinoids found in hemp to help your canine companion live a happy and healthy life.

Chicken Flavor

Displays & Fixtures

MyRemede offers a comprehensive, customizable display system that we can adapt to any retail layout. All display units, cabinets, and panels are made with fine materials and components to create welcoming spaces for customers while demonstrating the quality and functionality of our products.

Countertop Displays

Single Slab

- Size: 7" W x 5" D x 1" H
- Removable holder designed to display Softgels or Tinctures interchangeably

Double Slab

- Size: 14" W x 5" D x 1" H
- Designed to showcase two MyRemede products at a time

Triple Block Slab

- Size: 24" W x 16" D x 5" H
- Top copper block designed to showcase an assortment of MyRemede products and brochures
- Marble surface area designed for an elegant display of educational material

Wall-Mounted Displays

Main Cabinet with Drawer

- Size: 24" W x 5" D x 33" H
- Illuminated open shelving for easy access to product
- Fold-out drawer for additional storage
- Available with a lockable glass door

Side Cabinet with Wood Base

- Size: 12" W x 5" D x 33" H
- Illuminated display of educational material

Wall Shelving & Displays

Shelving Panel

- 36" W x 8" D x 90" H
- Designed for full merchandising display
- Illuminated shelves enhance product presentation and provide additional ambient light in store
- Banner area designed for easy application of magnetic header graphic

Cabinet Panel

- 36" W x 8" D x 90" H
- An ideal balance of product display and inventory storage
- Illumination feature to heighten visual interest
- Broad counter space is ideal for brochure and leaflet display
- Locking storage area built into the lower third of the unit
- Banner area designed for easy application of magnetic header graphic

Monitor Panel

- 36" W x 16" D x 90" H
- Easy installation bracket holds a 30" monitor for playing motion graphics to draw customer attention
- Ideal for showcasing educational content, ad material, and other digital media to further assist sales
- Locking storage area built into lower third of the unit
- Banner area designed for easy application of magnetic header graphic

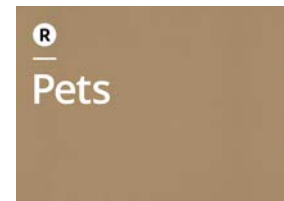

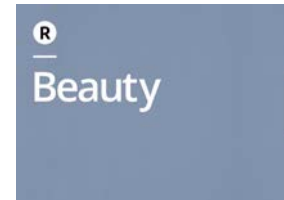

Vertical Graphic Panel

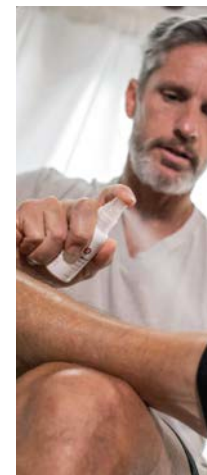

- 36" W x 2" D x 90" H
- Backlit panel designed for placement between fixtures to create visual drama

Header Graphic Options

Panel Graphic Options

Free Standing Merchandise Displays

Quattro

- Size: 36" W x 36" D x 46" H
- 4 separate merchandising units can be combined to form a 360 degree merchandising station
- Designed for combination of product, graphic, accessory, and prop display

Glass Bar

- Size: 42" W x 18" D x 38" H
- Glass-covered display unit designed for overhead view of assorted products
- Open side of glass for associate access to products

Checkout Counters

Point of Sale Counter

- Size: 36" W x 24" D x 40" H
- Customer checkout space designed to accommodate IT and wire management
- Marble-finish divider and associate work space for extra durability in high-traffic areas
- Rear cavity storage area

ADA Counter

- Size: 36" W x 24" D x 32" H
- Designed for customer service and document signing
- Lowered height accommodates customers with disabilities
- Meets state and federal ADA requirements

Sales Consultation Furniture

Consultation Bar

- Size: 42" W x 18" D x 38" H
- Designed for in-depth customer interaction and assistance
- Each unit has slide-out drawers for storing product information and other materials

Revive Bar and Credenza

- Revive Bar: 92" W x 28.5" D x 42" H
- Credenza: 96" W x 23.5" D x 92" H
- Combination of units designed to create a casual interactive area for before and after workout sessions
- Unit can be paired with stools for sit-down consultation
- Revive Bar offers ample storage, as well as an easy-to-clean surface for serving health food and drink options and displaying information on MyRemede Wellness Center sessions and services
- Storage space in Credenza designed to hold three refrigerated units, with extra space for additional storage needs

Advertising Fixtures

Lightbox - Large

- Size: 31.75" W x 41.75" H
- Lightweight, dual-side illumination with snaplock for easy graphic changeout
- Ideal for 24-hour window display
- Illumination feature equipped with on-off switch

Lightbox - Small

- Size: 21.75" W x 33.75" H
