**WINAICO Partners Nationally with CED Greentech**

WINAICO, the largest Taiwanese solar manufacturer, has announced that its modules are now available nationally through CED Greentech, a division of Consolidated Electrical Distributors, Inc. CED Greentech is one of the largest electrical product wholesale distributors in the United States. With an extensive on-site inventory, they feature products from the solar and electrical industry's top manufacturers.

Today channel partners can benefit from WINAICO's high-quality and high-power density solar panels as well as CED Greentech's superior service and support. As a Bloomberg-listed, Tier 1 manufacturer, WINAICO's high reputation and outstanding warranties assure product longevity and investment security. WINAICO and CED Greentech's partnership is focused on providing the best products for their customers.

As a global PV brand, WINAICO produces and distributes high-performance crystalline modules worldwide. WINAICO is the first module manufacturer to accomplish 310W on 60-cell panels using PERC technology. Additionally, its WST poly series has achieved the highest PTC rating, listed [here](#). WINAICO also works with numerous residential and commercial lenders to offer loan and lease options to authorized dealers, including installation specialists and project developers.

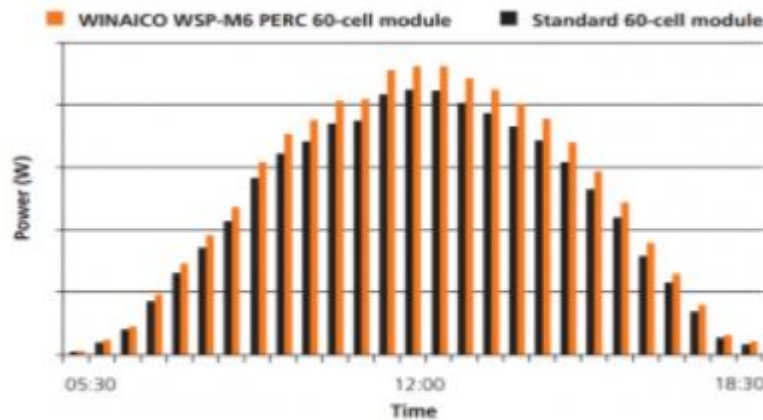

"WINAICO could not be more excited about this alliance and looks forward to a future characterized by the unlimited power to perform." -Sascha Rossmann VP of Global Sales at WINAICO

CED Greentech has recognized WINAICO's quality, performance and increasing brand recognition throughout the U.S., and this partnership will provide another source to access WINAICO's modules for those installers that prefer purchasing through distribution channels. Please reach out to your local CED Greentech with questions, pricing and availability.

### Grow your Business with High Efficiency WINAICO WSP-310W (60 cell) Panel

As an industry technology, WINAICO is the first company to reach 310 Watts in a 60-cell module with Passivated Emitter Rear Cell (PERC) technology in mass production. The black framed high quality panel is honored with Top Solar Products 2015 by Solar Power Magazine.

Thanks to the aluminum layer on the rear side, PERC cell captures more sunlight and absorbs a broader light spectrum. As a result, the energy output of a WINAICO PERC module is higher than a standard module across a whole day. [This 2 page technical document](#) is available for your sales presentation.

Differences in energy output across a whole day between WINAICO's PERC module and a standard solar module.
