Atom Limbs' Hot Seat Session Is Live Now

By Colin Linneweber

Dear Reader,

Buck Jordan is about to go live with [Tyler Hayes, the CEO of Atom Limbs](#). Atom Limbs creates artificial limbs that were once only seen in science-fiction movies, and it's your latest award-winning startup recommendation.

[You can click here to tune in to the Hot Seat Session right now.](#)

Among other inventions, Atom Limbs built Atom Touch, the world's first mind-controlled bionic arm. Unlike traditional prosthetic arms, Atom Limbs' groundbreaking design uses artificial intelligence (A.I.) to listen to nerve signals and react in real-time.

Atom Touch is more advanced than any prosthetic on the market today. And let this sink in: Atom Limbs' technology can restore a user's full sense of touch! It's intuitive, strong, fast, light, and doesn't require surgery.

Renowned names back Atom Limbs, including the Defense Advanced Research Projects Agency (DARPA) and the Johns Hopkins University Applied Physics Laboratory. It's also received mainstream media attention, with CNN calling Atom Limbs' bionic arm, "Like something out of space come to Earth."

Atom Touch is still in the pre-market stages, but it's soon going to be available for purchase. Once that happens, its technology could forever improve the lives of 2 million Americans who live with limb loss.

In today's Hot Seat Session, Buck is going to ask Hayes about his plans for the company including expansion, innovation, and staying ahead of the competition...this will be a session you don't want to miss.
