

**Imagine a world in which all individuals have access to the resources necessary to participate fully in the human experience**

## Our mission

Unity Foundation was founded in 2020 with a mission to collaborate with social service organizations and other support providers to develop grass-root, holistic, sustainable technology-based solutions that help uplift individuals in underserved communities.

## Removing barriers to equitable access

The key to successfully addressing current digital divide is the strategic removal of barriers.

Technology has the power to build bridges between community members and the public, commercial, and non-profit organizations that support them. With access to reliable, interconnected digital communication channels and secure data-sharing systems, social service organizations and other support providers are better able to maximize the good they can accomplish with their limited funding.

**Unity**  
Foundation

## Will you join us?

We seek out partnerships with individuals and organizations that bring diverse perspectives and backgrounds to the table.
