We're undertaking a huge renovation for some very small reasons

To ensure we fully meet the needs of the nearly 3,000 premature and sick infants that pass through our doors each year, we are completely renovating and expanding the Newborn Intensive Care Unit (NICU). Among the many new and improved elements are:

- **29 private patient rooms** and eight semi-private rooms for the most high-need infants
- A growth and development unit to provide the most **therapeutic environment for infants** who are beyond the acute medical stage
- **An innovative neighborhood layout** that includes gathering areas for learning and socializing with other NICU families
- **A hybrid design** suited to babies' developmental needs, one of the first of its kind in the world
