

Max Oilfield Services

When Max Oilfield Services opened for business in 2004, it had one picker truck. Now, its modest offerings have matured to include 30 trucks and almost 70 staff members, including two full-time safety officials. Its list of specialties has grown as well, offering a number of heavy oilfield trucking services such as temperature-controlled and production equipment transportation, rig matting rental support and installation, drilling and production tank rentals, heavy-lifting picker services, rig moving, bed trucks, winch trucks and more. With an emphasis on customer service and a management team with the drive to succeed, Max Oilfield is dedicated to providing "Service to the Max."

Remote Waste LP

Remote Waste offers waste water treatment solutions for the oil and gas industry in western Canada, specializing in sub-zero conditions like those found in Yukon and the Northwest Territories. Its mobile waste water treatment units can be connected, allowing for efficiency in treating larger volumes of sewage. The company's employees attend regular training sessions, ensuring the customer is always being served with the most current and effective standards and procedures offered in the industry.

Desran Holdings

Located just south of Athabasca, Desran Holdings trucks oil and water to oilfield companies operating just south of Athabasca. In addition to its trucking services, Desran keeps potassium chloride and inhibitor on hand, which are otherwise not easily accessible to companies in the area. As a small mom-and-pop company with a low employee-turnover rate, great customer service is always on their agenda.

Find-it

Find-it is involved in pipeline gas leak detection, but not in the way that you would expect: in addition to machines and instruments, they use a team of specially trained dogs. With the ability to work wherever, whenever, and in varying temperatures, the canines Find-it uses have a 98 per cent success rate in detecting leaks. Find-it also makes use of flame ionization and laser methane detectors and ultrasonics.

Quinn Pumps

Quinn Pumps manufactures, distributes, services and repairs reciprocating pumps. In addition, the company uses information gathered by their own well-tracking system to provide creative solutions to pump challenges their customers may face and to ensure their customers always have the proper pump on their wells. They made their way into the U.S. market in 1999, and now have 21 locations across the United States and 20 locations in Canada.
