

# AI is So Much More Than Just Another Buzzword.

## BrainTech is transforming how data gets processed.

In 2022, everyone is saying they have the best and brightest AI in the biz. We know, it's exhausting. What if we told you that AI can transform the way you do business, without all the bells and whistles?

BrainComp uses AI to help you index your data across your enterprise—including internal systems and external storage. It takes unstructured data and applies pre-built models to organize data in ways that make sense for your users. Best of all, it's completely configurable to work with the data you have, no matter what area of business you work in.

## Business = Risk

Today, doing business means taking on risks. Three out of five companies surveyed by Forrester in 2022<sup>1</sup> said that the greatest risks to their business are caused by a lack of visibility into their data.

BrainTech is on a mission to mitigate that risk with real insights from our proprietary data models. BrainTech will scope a complete AI analysis solution based on your use cases and our expertise. We'll accelerate your time to deploy by leveraging our pre-built models in addition to custom models. And we'll do it all while educating your employees on the different types of AI, how ours works, and how they can continue to expand their usage of the product post go-live.

# THREE OUT OF FIVE

COMPANIES NAMED LOW  
VISIBILITY INTO DATA AS THE  
TOP AREA OF BUSINESS RISK

**BrainTech has transformed our oversight process and helped us pinpoint supply chain disruption to a greater degree than ever before.**

# Why BrainTech?

## Not Just an Engine

BrainTech is more than an AI company—we're a people company. BrainTech has developed the only 1:1 professional services model in the industry.

Our professional services group, known as our AI Outfitters, will work side-by-side with your administrators to ensure your AI models are configured for your unique use cases.

Our professional services group, known as our AI Outfitters, will work side-by-side with your administrators to ensure your AI models are configured for your unique use cases.

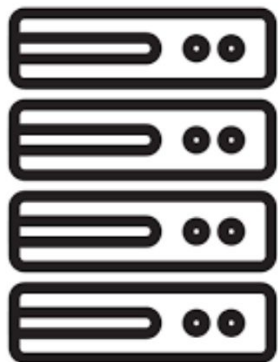

## The Most Pre-built Models on the Market

BrainComp provides best-in-class analytics and AI technology. With BrainComp, Epicode can automatically identify and extract concepts across your repositories with AI-driven analysis.

We've embedded the application with expertise with 500+ pre-trained models, resulting in unparalleled domain knowledge.

## Tier 4 Data Centers for Expert Security

BrainTech is hosted in Tier 4 data centers. The servers and security are managed by our Information Security team in the USA. The data centers we lease manage physical security.

BrainTech servers are replicated in real time across several geographic instances. More information regarding our disaster recovery and business continuity can be shared upon request.

**Brain Tech**  
ARTIFICIAL INTELLIGENCE

Founded in 2015, BrainTech is transforming how businesses interpret their data. Data is more than an asset; it's the foundation of a good business. BrainTech helps companies organize data that will inform every decision in real time. Organizations of all sizes and industries use BrainTech's technology to automate data preparation, collection, and synthesis.
