

3 ITALY WELCOME CENTER

STUDIO III/ SPRING 2022

Software: Revit

The design of the Italy Welcome Center will take place in two adjacent spaces located in the Leonardo da Vinci Airport in Rome, Italy. The goal is to turn history into contemporary. The design of the Welcome Center will be inspired by the iconic Colosseum. The main entrances and the accent wall in the space will have arches and a stone surface which will be the main material of this design and this will represent the structure of the Colosseum and its materials. In the Welcome Center, you will find curved shapes and forms present in the furniture and patterns that will enhance the elements and principles found in the design of the Colosseum. With grab-and-go Italian snacks, literature, items made by local artisans, and comfortable as well as functional seating areas for the users.
