- Remote control frequency: 2.4 GHz
- Remote control distance 50M
- Charging duration: 70 to 75 minutes
- Playtime: 12 minutes
- Net package weight: 1.43 pounds
- Recommended age: 14 years and above

Customer experience

The hovercraft toy came in beautifully packaged. The box mentions the brand name and other technical features that include remote control frequency, frequency range, and the toy's speed.

Upon unboxing, the first thing that comes in your hand is a classy High-speed RC boat with a sleek design. Next up, we get a USB charging cable. The box also has two rechargeable batteries along with one screwdriver. The next thing in the package is a cleaning towel meant for cleaning purposes. And at the end, the box contains a user and control manual with all the crucial instructions mentioned.

The hovercraft's main body is ABS (Acrylonitrile butadiene styrene), excellent material with waterproof qualities. There is an on/off button on the main body of the boat. There are two main propellers behind the toy, while one main propeller is present at the central body. The hovercraft also has LED lights at the front.

The two propellers at the back push air in a backward direction at a fast speed; as a result, the hovercraft races in a forward direction. The base body is made of rubber that gets filled with air when we start propellers, and as a result, the hovercraft begins advancing. The remote control has a sturdy design and is easy to grab. It comes with various control options for each propeller.

Strengths and weaknesses

I tested the hovercraft in water, and the result was up to my expectations. The speed was fast, and control was easy. The hovercraft's battery lasted for good 75 minutes. The batteries are powerful, so the hovercraft could advance in the water with waves without facing any issues. I also tested the boat toy on the ground, and it glided smoothly on the solid surface.

The plus points of this toy are that it has a low battery indicator and comes with a cleaning towel. You can clean the boat after sailing it in the water and put on charging afterward.

One limitation of the toy that I experienced was that the boat control was difficult to manage in water when the air was strong, and speed was also affected. Besides that, the toy is worth the money.

Important tips

- Make sure that kids use this toy under the supervision of adults.
- Clean and then dry the toy before connecting it to the charger.
- Make sure that there is no person in the water to avoid any injury.
- Avoid the area of water with weeds so that propellers don't get tangled up.
- Make sure to keep a distance from the high-speed rotating propellers.

My opinion

Fast speed remote Control RC Hovercraft is one of the most exciting toys kids can get their hands on. This innovative toy can make kids obsessed. Besides this, hovercraft allows the families to make some fun memories together. I think this toy is a good purchase that too at a reasonable price.

Amazon buying experience

My purchasing was smooth and error-free. The seller was responsive and cooperative. Delivery was on time. The product came in similar condition as mentioned online. I will recommend this product.
