

A COLLABORATIVE APPROACH TO PATIENT CARE

For more than 30 years, BayCare Clinic® physicians have been leaders in providing specialty healthcare services to the communities we serve.

Our primary focus is providing personalized, high-quality care by working collaboratively with patients and other providers.

“We look forward to enhancing this collaborative approach through our new and valued partnership with Wisconsin Chiropractic Association.”

Dr. Ashwani Bhatia, BayCare Clinic chief medical officer

At BayCare Clinic we have more than 100 physicians across 20 specialties serving northeastern Wisconsin.

Our physicians are board certified or are active candidates for certification through boards recognized by the American Board of Medical Specialties. Many BayCare Clinic specialists also are fellowship trained in subsets of their fields.

We value the independence a physician-owned practice provides. As independent practitioners, we believe we can provide a variety of choices for our patients, giving them the most freedom to take charge of their health care journey.

“As a specialty health care services provider, we pride ourselves on providing comprehensive care through collaboration as we help our patients achieve their health care goals,” says Dr. Ashwani Bhatia, chief medical officer of BayCare Clinic. “We look forward to enhancing this collaborative approach through our new and valued partnership with Wisconsin Chiropractic Association.”

Each of our departments aim to improve patients’ experiences by balancing clinical and patient expectations and providing them with high-quality care and service, just as we would for our own family.

Our orthopedic surgeons and sports medicine specialists at **Orthopedics & Sports Medicine BayCare Clinic** address a variety of bone, joint, and muscle problems through surgical and non-surgical treatment options including regenerative medicine. Our goal is to minimize pain, improve mobility and function and get patients back to their normal activities.

BayCare Clinic Pain & Rehab Medicine physicians focus on spine and musculoskeletal care. They offer the highest quality clinical care to a

complex patient population, often using a combination of pharmacology and interventional techniques to improve pain and restore function.

BayCare Clinic Neurological Surgeons treat a variety of conditions, including back pain, neck pain, disc herniations, spinal stenosis, spinal instability, peripheral nerve entrapment, head injuries, spinal injuries, and more.

BayCare Clinic is continuously exploring innovative ways to better serve our patients by making access to high-quality specialized care more convenient. We provide treatment based on the most up-to-date and advanced evidence-based procedures, and practice techniques that are more effective in terms of clinical outcomes and patient satisfaction.

We pride ourselves on a collaborative approach for patient care. We are excited and proud to grow our premium corporate partnership with Wisconsin Chiropractic Association.
