### **Digital Corps Nominated For MIRA Award 2023**

MUNCIE, Ind. - The Ball State University Digital Corps has been nominated for the 2023 TechPoint MIRA Awards! The Digital Corps is an on-campus creative production agency of interdisciplinary student teams that provide innovative technology solutions for clients.

The MIRA Awards are Indiana's largest, best known, and most prestigious technology awards, acknowledging the state's "Best of Tech." Out of the 14 categories this year, Digital Corps was nominated under the Talent and Pipeline Awards Division for the Education Impact Award. This award recognizes STEM educators, organizations, programs and platforms that inspire and open doors for learners of any age. Nominees have a positive impact on student achievement and the future workplace.

"It feels good to be nominated this year. The nomination is really just a testament to all the hard work [that] the staff and students have done since the Digital Corps was created in 2006.....Since the Education Impact Award kicked off this year, this seems like a great time for the Digital Corps to be recognized!" says our creative director, Brandon Smith.

The Digital Corps is among 130 nominees including individuals, educators, community organizations, state agencies, investors, entrepreneurs and tech employers that had remarkable achievements in the past year. The MIRA Awards will be presented on Saturday April 22 at their 24th annual gala.

###

The Digital Corps provides a unique on-campus job for undergraduate and graduate students with aspirations to work in innovative and creative fields. Digital Corps students work on real-world projects in a collaborative environment. They also learn technical and professional skills that supplement the instruction they receive in traditional academic classes. Combined with the high-quality work in their portfolios, Digital Corps students are uniquely situated to impact the professional world upon graduation.
