# Make your move.

Orthopedic surgeons at The Miriam Hospital have taken ACL repair and hip and knee replacement surgery a step into the future.

Our skilled physicians utilize an advanced computer navigation system and infrared camera technology for the most accurate implant placement and ACL reconstruction. The result is significantly improved outcomes and less likelihood of future corrective surgery.

Computer-navigated surgery is less invasive than traditional surgery. That means less bleeding and a quicker recovery, so you can get back in the action sooner.

To learn more about surgical navigation call 401-444-4800 or visit [smaller.miriamhospital.org](http://smaller.miriamhospital.org).
